TECHNICAL KNOWLEDGE	19

ACA overview

The ICAEW chartered accountancy qualification, the ACA, is one of the most advanced learning and professional development programmes available. Its integrated components provide an in-depth understanding across business, finance and accountancy. Combined, they help build the technical knowledge, professional skills and practical experience needed to become an ICAEW Chartered Accountant.

Each component is designed to complement the other, which means that students can put theory into practice and can understand and apply what they learn to their day-to-day work.

ICAEW constantly reviews the content of the ACA qualification to reflect real life business challenges. Over the next decade, sustainability, technology and ethics will be the three key themes impacting every accountant and business they serve. We work closely with employers, tuition providers, academics and examiners to ensure that the ACA equips the chartered accountants of the future with the skills and knowledge they need to meet these challenges and to be successful. Sustainability, technology and ethics have been integrated throughout the qualification, delivering forward-thinking business leaders ready for the challenges of tomorrow's world.

THE ACA QUALIFICATION AND SUSTAINABILITY

Finance and accounting professionals need to move beyond simply measuring and reporting the impact of climate change, environmental regulation, supply chain pressure and rising energy costs. They must focus on understanding these and other emerging sustainability-related implications, integrating them into financial management and strategic business planning. ICAEW has been at the forefront of this movement over the past decade and has adapted the ACA qualification to reflect that. We see its role as not simply integrating knowledge and understanding the broader implications of environmental, social and governance issues into organisations, but also seeding this thinking into the mindset of our members.

Our syllabus, Specialised Learning and professional skills framework contribute toward creating ICAEW Chartered Accountants who recognise that sustainability is at the core of what they do and are capable of actively using their business skills to analyse how to make the new sustainable economy work for their business.

Sustainability is an integrated element from assurance and corporate reporting to strategic business planning and management reporting, providing transparent information for users. It's an embedded element across the ACA qualification with its beginnings at the newly developed Sustainability and Ethics module at Certificate Level through to the Strategic Case Study at Advanced Level. The new Specialised Learning and professional skills framework provides the opportunity to create and update content rapidly which will be invaluable for sustainability conversations to remain relevant.

There is much that is closely related to the skills and experience of ICAEW Chartered Accountants; for example, the identification and management of risks, corporate governance, compliance with laws and regulations, design and operation of management control systems, measurement of liabilities and impaired assets, information reporting and assurance, and new forms of taxation. Where the technical issues extend beyond an accountant's reach, working with other experts is already recognised as good practice.

THE ACA QUALIFICATION AND TECHNOLOGY

Changes in technology have automated many routine aspects of accountancy. But with changes in technology also come complexity and risk. Accountants need to adapt and develop new skills to manage these changes.

While there are many new technology capabilities that have broad application across the business and consumer environment, there are several trends that have the greatest potential to transform the accountancy profession (ABCD): **A**rtificial intelligence, **A**utomation, **B**lockchain, **C**yber security, **C**loud computing, and **D**ata and **D**igital Transformation.

These and other innovations are likely to have a significant impact on the way that accountants access information, transact and manage business finances. Technology tools can provide information more quickly and often more accurately than humans, but they cannot replicate human intelligence, critical thinking and quality decision making, or effective communication of the output of analysis. Chartered accountants continue to hold key roles such as validating the source of the data, evaluating the risks, interpreting and analysing the outputs, and ensuring the tools support effective management of the organisation. As automation continues to expand understanding the interconnectivity between systems will be fundamental.

As routine and compliance work reduces, there is greater focus on the development of skills which equip professionals to work with the outputs of automated processes, with other specialists, and in a changing world. The skill set needed by accountants is changing as technological advances are made; it's the ability to adapt and rapidly respond to these changes that will be key.

We believe that skills such as analysis, interpretation, professional scepticism, communication, collaboration, adaptability, resilience and commerciality are essential for tomorrow's business leaders; these are embedded throughout the ACA exams and professional skills framework.

THE ACA QUALIFICATION AND ETHICS

Culture and values are central to long-term success. How a business adopts an ethical approach towards its staff, shareholders, customers, regulators and other stakeholders, as well as within its own operations, has a bigger impact than any performance measure or operational improvement.

Demonstrating a clear commitment to ethical behaviour is one of the main drivers of better performance; it delivers an advantage when recruiting, it adds value to a brand, and it instils trust and confidence in partners, suppliers and others that the organisation is well run and resilient.

Achieving that is not a matter of simple knowledge. Few ethical challenges will have simple right or wrong responses. They require technical understanding, critical appraisal, and application of professional scepticism and judgement with skilful handling. Accountants must have the necessary skills to apply professional judgement, have a curious mindset and take into account what has been learnt as an ACA student about their ethical responsibilities as a chartered accountant.

There will be unique ethical challenges throughout any chartered accountant's process of learning and career. They serve a variety of masters: senior management, external stakeholders, regulators and above all the public interest responsibility of their profession. Because of the rigorous and effective training and continual professional development as part of their lifelong learning, chartered accountants can speak up and take a lead. None of this can happen without one critical element: professionalism. That goes beyond merely knowing the Code of Ethics; it means embodying the right behaviours and values and having the ability and willingness to push back against those who might compromise the integrity of the business.

Ethics and professionalism are embedded throughout the ACA qualification, from understanding and applying knowledge of the Code of Ethics and developing safeguards, to adopting a curious mindset and applying professional judgement. We build ethical and professional confidence in our qualification as it prioritises not only technical knowledge of the ethical framework but also challenges accountants with scenarios that accurately reflect the ethical dilemmas a chartered accountant may face in business.

ACA components

SPECIALISED LEARNING

Our 14 business, finance and accountancy modules cover the core technical knowledge and application of skills for all ICAEW Chartered Accountants. However, we recognise each student's unique journey to membership and have therefore built Specialised Learning into the core of the ACA qualification.

Specialised Learning provides tailored learning opportunities and therefore forms a key element of the ACA qualification. Students will have access to an e-learning platform that hosts a wide range of content relevant to students working across different sectors and specialisms. This content will be brought to life in a practical and engaging way and will cover both technical and non-technical skills.

Students will need to complete a minimum of 30 units of Specialised Learning. Each unit will roughly equate to an hour of learning. By having access to different content students and employers will be able to personalise the experience to fit with a student's individual learning needs and role.

PROFESSIONAL SKILLS AND EXPERIENCE

The ACA features 25 professional skills split across five key competency areas. A three-stage proficiency model will guide students to develop their unique skills portfolio.

Professional development prepares students to successfully handle a variety of different situations that they encounter throughout their career. Building in professional development as part of the ACA qualification recognises that this is the start of a student's lifelong learning journey.

The skills development framework is set around core competencies and skills. These recognise that clear effective communication is at the heart of all that we do, and is balanced with developing critical thinkers, who are resilient and inclusive and are underpinned by professionalism. We want to develop leaders who can be authentic and remain true to their personal values.

With diversity and inclusion being one of our key strategic pillars it is important that these skills encompass collaboration and inclusion whilst celebrating diversity rather than having a 'one size fits all model'.

WORK EXPERIENCE

Professional work experience is undertaken as part of a training agreement with an authorised training employer or principal. Students need to complete at least 450 days, which normally takes between three and five years. The knowledge, skills and experience they gain as part of their training are invaluable, giving them the opportunity to put what they're learning into practice.

Student professional work experience should:

- include responsibility levels that increase in depth and scope as the student progresses through their training;
- be recorded throughout their training agreement; and
- expose them to as many different practical assignments, finance functions and/or clients in as many different sectors as possible.

14 BUSINESS, FINANCE AND ACCOUNTANCY EXAMS

Students gain in-depth knowledge across a broad range of topics in business, finance and accountancy. The exams are designed to complement their professional work experience, so they constantly progress through the qualification providing an integrated learning experience.

There are 14 modules over three levels - Certificate, Professional and Advanced. Flexibility allows each student journey to membership to be unique to them.

CERTIFICATE LEVEL

There are six exams at this level that introduce the fundamentals of business, finance and accountancy. Students may be eligible for credit for some exams if they have studied a qualification we recognise. Find out more at [icaew.com/cpl](https://www.icaew.com/cpl).

The Certificate Level exams are either 1.5 or 2 hours long, have a 55% pass mark and can be sat in any order throughout the year.

PROFESSIONAL LEVEL

The next six exams build on the fundamentals and test students' understanding and ability to use technical knowledge in real-life scenarios. The exams can be taken in March, June, September and December.

The Professional Level exams are 2.5 hours long, except for Assurance, Risk and Reporting and Tax Compliance and Planning which are 3 hours long. Each exam has a 55% pass mark.

Permitted texts are available for Assurance, Risk and Reporting, Corporate Reporting, Data and Assurance and Tax Compliance and Planning. Fundamental Case Study is open book.

The Professional Level exams are flexible and can be taken in any order to fit with a student's day-to-day professional experience. The Fundamental Case Study aims to bring together technical knowledge gained by studying the Certificate Level material with professional work experience and professional skills and can therefore be seen as an excellent transition from Certificate to Professional Level. Equally students are likely to find the Corporate Reporting, Data and Assurance and Business and Digital Strategy exams in particular as helpful stepping stones to progress to the Advanced Level.

ADVANCED LEVEL

There are two case studies at Advanced Level that test students' understanding and strategic decision making at a senior level. The case studies present real-life scenarios, with increased complexity from the Professional Level exams. Advanced Level challenges students' ability to problem solve, apply critical thinking, identify ethical implications and provide effective solutions.

The Advanced Level exams can be taken in July and November. They are fully open book,

so they replicate a real-life scenario where all the resources are at their fingertips and include advance information.

Technical Case Study and Strategic Case Study are both 4 hours long. Each has a 50% pass mark.

For more information, guidance and support on exams, visit the exam resources area on our website at [icaew.com/studyresources](https://www.icaew.com/studyresources).

Skills progression through the ACA exams

Specialised Learning is an integrated component of the ACA qualification, with a core competency framework setting out the skills essential to equip ICAEW Chartered Accountants of tomorrow. A subsection of these skills are embedded in the 14 exams and assessed in exams. The following skills are present throughout the 14 business, finance and accountancy exams:

The level of skill required to pass each exam increases as ACA trainees progress upwards through each Level of the ACA exams. The skills progression embedded throughout the ACA qualification ensures ACA trainees develop the knowledge and skills to successfully operate in the modern workplace and which are expected by today's forward-thinking employers.

Skills	Certificate Level		Professional Level		Advanced Level
	Assurance and Risk Fundamentals, Business Law, Sustainability and Ethics	Accounting Fundamentals, Business Insight and Performance, Tax Fundamentals	Fundamental Case Study, Assurance, Risk and Reporting, Corporate Financial Strategy	Business and Digital Strategy, Corporate Reporting, Data and Assurance, Tax Compliance and Planning	Technical Case Study, Strategic Case Study

 **Assimilating and using information**

Understanding the situation and requirements	Objective testing	Objective testing and simple scenarios	Scenarios		Complex business scenarios
Identifying and using relevant information	Information as provided		Single information source provided	Several information sources provided	Multiple information sources provided
Identifying and prioritising key issues	Issues given		Issues included in scenarios		Issues included in complex scenarios

 **Structuring problems and solutions**

Structuring data	Specified techniques		Specified techniques	Extends to techniques inferred by nature of problem	Techniques inferred by the nature of problem
Developing solutions	Highly specified tasks	Specified problems	Specified problems		Defined output with implicit, although unspecified problems

 **Applying judgement**

Applying professional scepticism and critical thinking	Objective testing		Specified requirement in simple scenario	Specified requirement in scenario	Specified requirement in complex scenario
Relating issues to the broader business environment, including ethical issues	Objective testing	Objective testing and issues in simple scenarios	Issues in scenarios		Issues in complex scenarios

 **Concluding, recommending and communicating**

Concluding and recommending	Objective testing Not assessed	Specified conclusions and recommendations in simple scenarios		Conclusions and reasoned recommendations supported by own evidence
Communicating	Prescribed exam format		Exam requirements, including some professional presentation	Professional presentations and reports including reasoned recommendations

PROFESSIONAL SKILLS ASSESSED IN THE ACA EXAMS

ASSIMILATING AND USING INFORMATION

Understand the situation and the requirements:	Identify and use relevant information:	Identify and prioritise key issues and stay on task:
<ul style="list-style-type: none"> • Demonstrate understanding of the business context. • Recognise new and complex ideas within a scenario. • Identify the needs of customers and clients. • Explain different stakeholder perspectives and interests. • Identify risks within a scenario. • Identify elements of uncertainty within a scenario. • Identify ethical issues including public interest and sustainability issues within a scenario. 	<ul style="list-style-type: none"> • Interpret information provided in various formats. • Evaluate the relevance of information provided. • Use multiple information sources. • Filter information provided to identify critical facts. • Identify and interpret information in data analytics software. 	<ul style="list-style-type: none"> • Identify business and financial issues from a scenario. • Prioritise key issues. • Work effectively within time constraints. • Operate to a brief in a given scenario.

STRUCTURING PROBLEMS AND SOLUTIONS

Structure data:	Develop solutions:
<ul style="list-style-type: none"> • Structure information from various sources into suitable formats for analysis. • Identify any information gaps. • Frame questions to clarify information. • Use a range of data types and sources to inform analysis and decision-making. • Structure and analyse financial and non-financial data to enhance understanding of business issues and their underlying causes. • Present analysis in accordance with instructions and criteria. • Use spreadsheets to assimilate, structure and analyse data. 	<ul style="list-style-type: none"> • Identify and apply relevant technical knowledge and skills to analyse a specific problem. • Use structured information to identify evidence-based solutions. • Identify creative and pragmatic solutions in a business environment. • Identify opportunities to add value. • Identify and anticipate problems that may result from a decision. • Identify a range of possible solutions based on analysis. • Identify ethical dimensions of possible solutions. • Select appropriate courses of action using an ethical framework. • Identify the solution which is the best fit with acceptance criteria and objectives. • Define objectives and acceptance criteria for solutions.

APPLYING JUDGEMENT

Apply professional scepticism and critical thinking:	Relate issues to the environment:
<ul style="list-style-type: none"> • Recognise bias and varying quality in data and evidence. • Identify assumptions or faults in arguments. • Identify gaps in evidence. • Identify inconsistencies and contradictory information. • Assess interaction of information from different sources. • Exercise ethical judgement. 	<ul style="list-style-type: none"> • Appreciate when more expert help is required. • Identify related issues in scenarios. • Assess different stakeholder perspectives when evaluating options. • Retain an overview of the business issue or scenario. • Appraise corporate responsibility and sustainability issues. • Appraise the effects of alternative future scenarios. • Appraise ethical, public interest and regulatory issues.

CONCLUDING, RECOMMENDING AND COMMUNICATING

Conclusions:	Recommendations:	Communication:
<ul style="list-style-type: none"> • Apply technical knowledge to support reasoning and conclusions. • Apply professional experience and evidence to support reasoning. • Use valid and different technical skills to formulate opinions, advice, plans, solutions, options and reservations. 	<ul style="list-style-type: none"> • Present recommendations in accordance with instructions and defined criteria. • Make recommendations in situations where risks and uncertainty exist. • Formulate opinions, advice, recommendations, plans, solutions, options and reservations based on valid evidence. • Make evidence-based recommendations which can be justified by reference to supporting data and other information. • Develop recommendations which combine different technical skills in a practical situation. 	<ul style="list-style-type: none"> • Present a basic or routine memorandum or briefing note in writing in a clear and concise style. • Present analysis and recommendations in accordance with instructions. • Communicate clearly to a specialist or non-specialist audience in a manner suitable for the recipient. • Prepare the advice, report, or notes required in a clear and concise style.

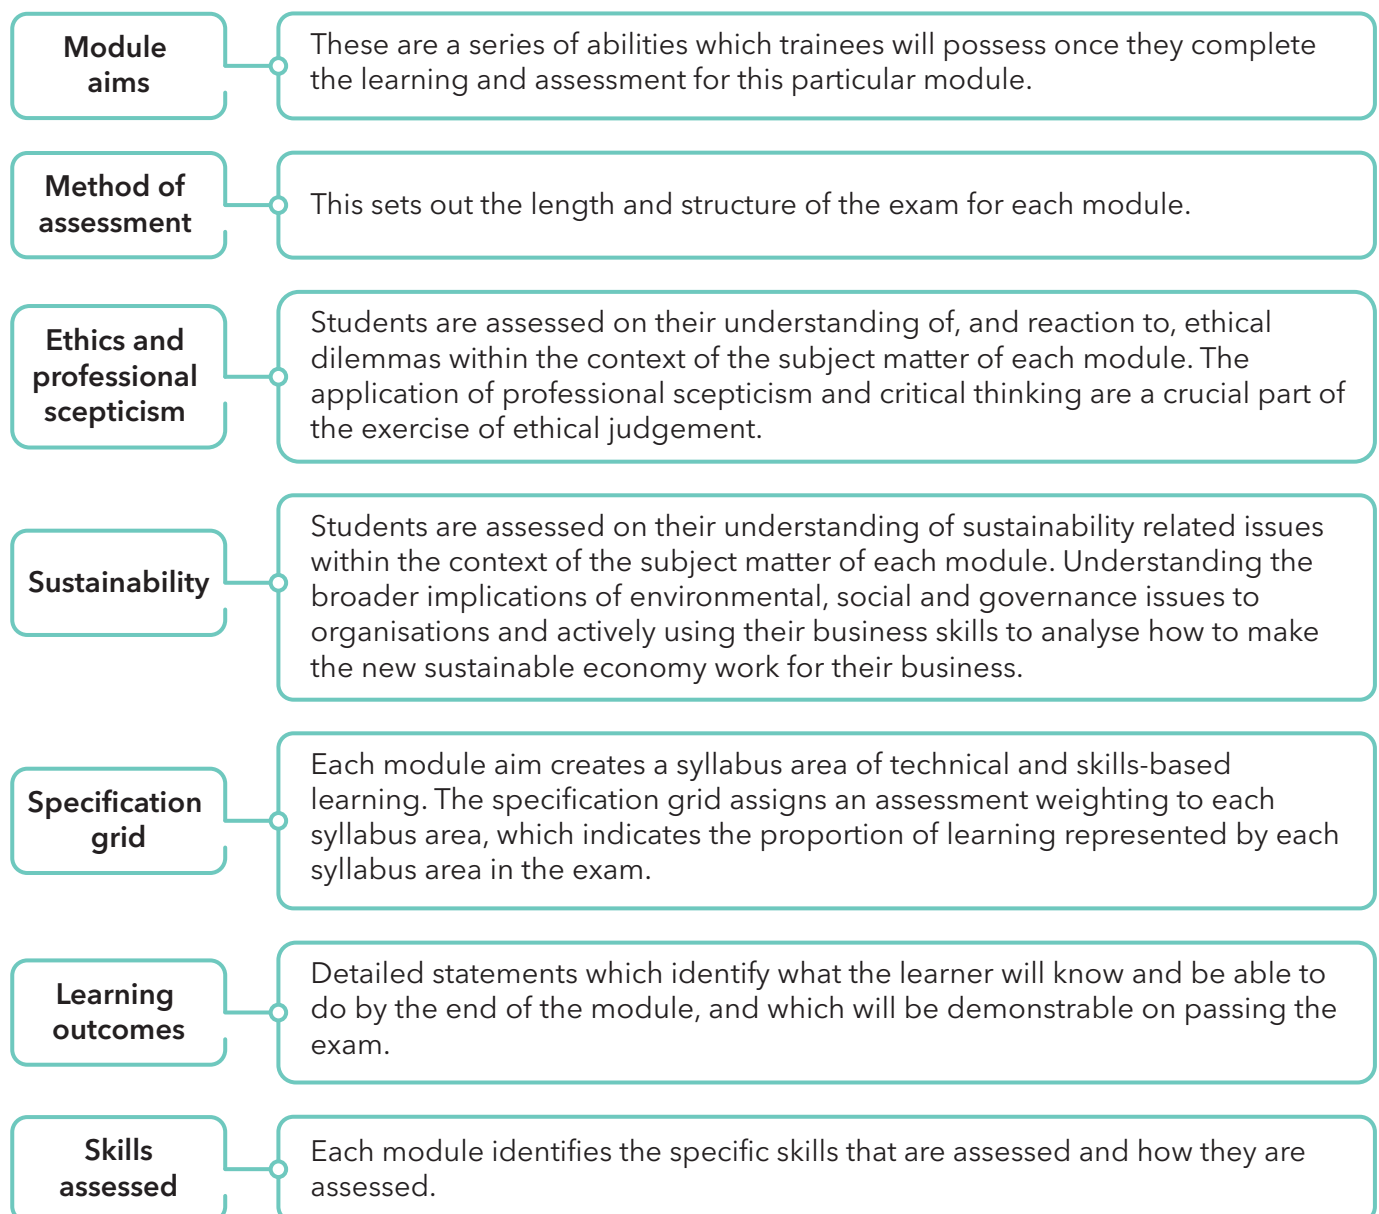

ACA Syllabus

The ACA syllabus is updated annually. The aim of the annual update is to ensure that the syllabus remains fit for purpose and can include amendments to cater for technical changes, clarification of learning outcomes, inclusion of new areas of knowledge impacting ICAEW Chartered Accountants, and removal of content for subject areas where there is duplication, repetition or content no longer relevant within the qualification. The process includes consultation with all key stakeholder groups and covers the skills, learning outcomes and technical knowledge grids of each module.

This document presents the learning outcomes for each of the ACA exams at Certificate, Professional and Advanced Levels. The learning outcomes in each exam should be read in conjunction with the relevant technical knowledge grids and, where applicable, the skills development grid.

UNDERSTANDING THE SYLLABUS FOR EACH MODULE

Each module has the following syllabus components:

Technical knowledge grids

The technical knowledge grids show the technical knowledge in the disciplines of assurance and audit, business analysis, ethics codes and standards, financial reporting, and taxation covered in the ACA syllabus by module. For each technical area, the level of knowledge required is indicated by a letter from A to D, as follows:

- Level A - thorough knowledge with a solid understanding
- Level B - working knowledge with a broad understanding
- Level C - general knowledge with a basic understanding
- Level D - awareness of the scope of the standard

Certificate Level

Assurance and Risk Fundamentals

MODULE AIM

To ensure that students understand the assurance process and fundamental principles of ethics, and are able to contribute to the assessment of internal controls and gathering of evidence on assurance work.

On completion of this module, students will be able to:

- understand the concept of assurance, why assurance is required and the reasons for assurance work being carried out by appropriately qualified professionals with an attitude of professional scepticism and the exercise of professional judgement;
- understand the components of assurance risk involved in assurance work;
- understand the importance of internal controls, document an organisation's information flows and internal controls and identify deficiencies in internal control systems;
- select methods of obtaining sufficient and appropriate assurance evidence and recognise when conclusions can be drawn from evidence obtained or where issues need to be referred;
- understand the importance of regulation of the profession and ethical behaviour to a professional accountant and identify key ethical issues; and
- understand the role of the ISSB and how assurance on sustainability reporting helps meet information needs.

SPECIFICATION GRID

This grid shows the relative weightings of subjects within this module and should guide the relative study time spent on each. Over time the marks available in the assessment will equate to the weightings below, while slight variations may occur in individual assessments to enable suitably rigorous questions to be set.

SYLLABUS AREA	WEIGHTING
1 The concept, process and need for assurance	20%
2 Risk, internal controls and information flows	26%
3 Obtaining assurance evidence	34%
4 Professional ethics and regulatory issues	20%

The following learning outcomes should be read in conjunction with the relevant sections of the technical knowledge grids at the end of this document.

METHOD OF ASSESSMENT

The Assurance and Risk Fundamentals exam is 1.5 hours long. The exam consists of 50 questions worth two marks each, covering the areas of the syllabus in accordance with the weightings set out in the specification grid. The questions are presented in the form of multiple choice, multi-part multiple choice, or multiple response.

ETHICS AND PROFESSIONAL SCEPTICISM

The importance of ethics both as a knowledge area and a behaviour to be demonstrated is reflected in the syllabus area below 'Professional ethics and regulatory issues'. The learning outcomes cover a range of threats and dilemmas to be identified as well as safeguards and solutions to be resolved. Professional scepticism is included in the requirement for the syllabus area 'The concept, process and need for assurance' where students are also required to recognise the need for the exercise of professional judgement.

SUSTAINABILITY

Students will need to understand how sustainability is an increasingly important aspect of financial reporting and therefore the increased demand for assurance over the accuracy and validity of that reporting. Students will be introduced to the IFRS Sustainability Disclosure Standards and the role and responsibilities of the various organisations.

1 THE CONCEPT, PROCESS AND NEED FOR ASSURANCE

Students will be able to understand the concept of assurance, why assurance is required and the reasons for assurance work being carried out by appropriately qualified professionals with an attitude of professional scepticism and the exercise of professional judgement.

In the assessment, students may be required to:

- a. recognise the concept of assurance (on financial and non-financial information including performance metrics and targets) and compare the purposes and characteristics of reasonable and limited levels of assurance;
- b. recognise why users desire assurance reports and identify examples of the benefits gained from them;
- c. compare the functions and responsibilities of the different parties involved in assurance work;
- d. identify the issues which can lead to gaps between the outcomes delivered by the assurance engagement and the expectations of users of the assurance reports and suggest how these can be overcome;
- e. identify the steps involved in obtaining, accepting and agreeing the terms of an assurance engagement;
- f. identify the process of planning an assurance engagement;
- g. define materiality and identify its role in the assurance engagement;
- h. identify how the assurance provider reports to the engaging party;
- i. recognise the need for professional scepticism and the exercise of professional judgement;
- j. recognise the characteristics of fraud and distinguish between fraud and error; and
- k. recognise the appropriate level of assurance provided on sustainability reporting, and the benefits of assurance on sustainability reports.

2 RISK, INTERNAL CONTROLS AND INFORMATION FLOWS

Students will be able to understand the components of assurance risk involved in assurance work. Students will be able to understand the importance of internal controls

and document an organisation's information flows and internal controls and identify deficiencies in internal control systems.

In the assessment, students may be required to:

- a. identify risks in an assurance engagement, including the components of audit risk;
- b. identify business risks and their impact on audit risk;
- c. identify the reasons for organisations having effective systems of control;
- d. identify the fundamental principles of effective control systems and the risk of overdependence on IT;
- e. identify the main business processes of an entity and information flows between areas of the business that need effective control systems;
- f. identify the components of internal control including the role of governance and risk management processes;
- g. define and classify different types of internal control, with particular emphasis on general IT and information processing controls and identify the difference between preventative and detective controls;
- h. identify how specified internal controls mitigate risk, including cyber security, data security, supply-chain risks, digital transformation and disruption as well as other emerging technologies and identify their limitations;
- i. identify internal controls or internal control deficiencies for an organisation in a given scenario;
- j. identify the role of an internal audit function in an organisation; and
- k. identify, for a specified organisation, the sources of information which will enable a sufficient record to be made of accounting or other systems and internal controls.

3 OBTAINING ASSURANCE EVIDENCE

Students will be able to select methods of obtaining sufficient and appropriate assurance evidence and recognise when conclusions can be drawn from evidence obtained or where issues need to be referred.

In the assessment, students may be required to:

- a. identify the reasons for preparing and keeping documentation relating to assurance work;

- b. identify the different methods of obtaining evidence, including remote auditing techniques, from the use of tests of control, substantive procedures, including analytical procedures and data analytics software;
 - c. recognise the strengths and weaknesses of the different methods of obtaining evidence;
 - d. identify the situations within which the different methods of obtaining evidence should and should not be used;
 - e. compare the reliability of different types of assurance evidence;
 - f. select appropriate methods of obtaining evidence from tests of control and from substantive procedures for a given business scenario;
 - g. recognise when the quantity (including factors affecting sample design) and quality (including analysis of data) of evidence obtained are sufficient and appropriate, after taking account of sampling risk, to draw conclusions on which to base a report;
 - h. identify the circumstances in which written representations from management should be requested and the reliability of such representations as a form of assurance evidence; and
 - i. recognise issues arising while obtaining assurance evidence that should be referred.
- d. recognise the importance of integrity, objectivity and independence to professional accountants, identifying situations that may impair or threaten integrity, objectivity and independence;
 - e. select appropriate courses of action to resolve ethical conflicts;
 - f. respond appropriately to the request of an employer to undertake work outside the confines of an individual's expertise or experience;
 - g. recognise the importance of confidentiality, including compliance with GDPR and identify steps to comply with GDPR and prevent the disclosure of information;
 - h. identify situations in which confidential information may be disclosed, including where reporting suspicions of money laundering;
 - i. identify the following threats to the integrity, objectivity and independence of assurance providers: self-interest threat, self-review threat, management threat, advocacy threat, familiarity threat and intimidation threat;
 - j. identify safeguards to eliminate or reduce threats to the integrity, objectivity and independence of assurance providers; and
 - k. identify the aims and purpose of the ISSB and how sustainability reporting helps meet user information needs.

4 PROFESSIONAL ETHICS AND REGULATORY ISSUES

Students will be able to understand the importance of regulation of the professional and ethical behaviour to a professional accountant and identify key ethical issues. Students will be able to understand the role of the ISSB and how sustainability standards help meet information needs.

In the assessment, students may be required to:

- a. identify the role of regulatory bodies and ethical codes and their importance to the profession;
- b. recognise the differences between a rules-based ethical code and one based upon a set of principles;
- c. identify and recognise the fundamental principles underlying the ICAEW Code of Ethics;

Technical knowledge

The tables contained in this section show the technical knowledge in the disciplines of financial reporting, audit and assurance, business analysis, ethics and taxation covered in the ACA syllabus by module.

For each individual standard the level of knowledge required in the relevant Certificate and Professional Level module and at the Advanced Level is shown.

The knowledge levels are defined as follows:

LEVEL D

An awareness of the scope of the standard.

LEVEL C

A general knowledge with a basic understanding of the subject matter and training in its application thereof sufficient to identify significant issues and evaluate their potential implications or impact.

LEVEL B

A working knowledge with a broad understanding of the subject matter and a level of experience in the application thereof sufficient to apply the subject matter in straightforward circumstances.

LEVEL A

A thorough knowledge with a solid understanding of the subject matter and experience in the application thereof sufficient to exercise reasonable professional judgement in the application of the subject matter in those circumstances generally encountered by chartered accountants.

KEY TO OTHER SYMBOLS:

→ The knowledge level reached is assumed to be continued.
