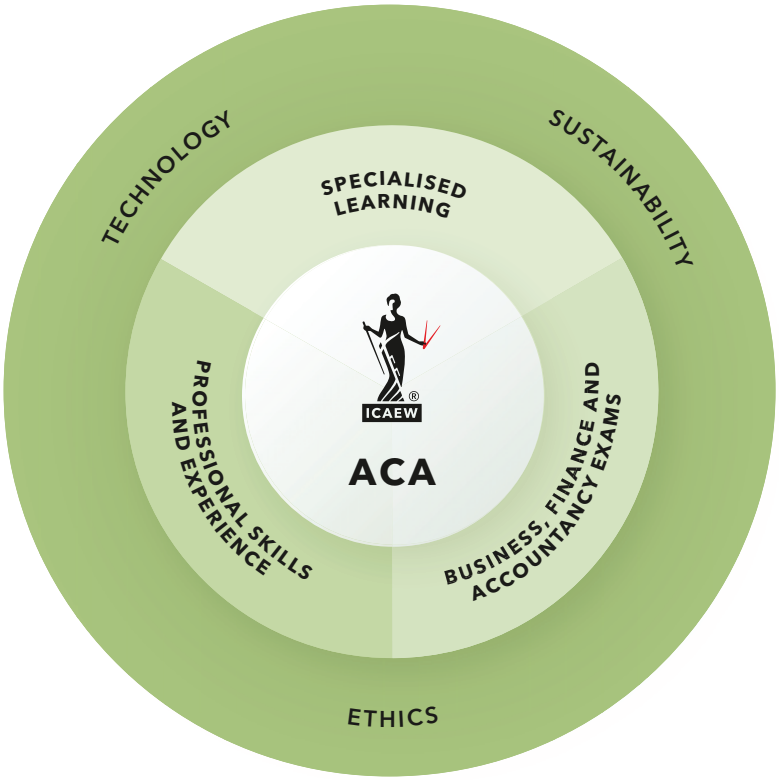
ACA overview

The ICAEW chartered accountancy qualification, the ACA, is one of the most advanced learning and professional development programmes available. Its integrated components provide an in-depth understanding across business, finance and accountancy. Combined, they help build the technical knowledge, professional skills and practical experience needed to become an ICAEW Chartered Accountant.

Each component is designed to complement the other, which means that students can put theory into practice and can understand and apply what they learn to their day-to-day work.



ICAEW constantly reviews the content of the ACA qualification to reflect real life business challenges. Over the next decade, sustainability, technology and ethics will be the three key themes impacting every accountant and business they serve. We work closely with employers, tuition providers, academics and examiners to ensure that the ACA equips the chartered accountants of the future with the skills and knowledge they need to meet these challenges and to be successful. Sustainability, technology and ethics have been integrated throughout the qualification, delivering forward-thinking business leaders ready for the challenges of tomorrow's world.

© ICAEW 2026

THE ACA QUALIFICATION AND SUSTAINABILITY

Finance and accounting professionals need to move beyond simply measuring and reporting the impact of climate change, environmental regulation, supply chain pressure and rising energy costs. They must focus on understanding these and other emerging sustainability-related implications, integrating them into financial management and strategic business planning. ICAEW has been at the forefront of this movement over the past decade and has adapted the ACA qualification to reflect that. We see its role as not simply integrating knowledge and understanding the broader implications of environmental, social and governance issues into organisations, but also seeding this thinking into the mindset of our members.

Our syllabus, Specialised Learning and professional skills framework contribute toward creating ICAEW Chartered Accountants who recognise that sustainability is at the core of what they do and are capable of actively using their business skills to analyse how to make the new sustainable economy work for their business.

Sustainability is an integrated element from assurance and corporate reporting to strategic business planning and management reporting, providing transparent information for users. It's an embedded element across the ACA qualification with its beginnings at the newly developed Sustainability and Ethics module at Certificate Level through to the Strategic Case Study at Advanced Level. The new Specialised Learning and professional skills framework provides the opportunity to create and update content rapidly which will be invaluable for sustainability conversations to remain relevant.

There is much that is closely related to the skills and experience of ICAEW Chartered Accountants; for example, the identification and management of risks, corporate governance, compliance with laws and regulations, design and operation of management control systems, measurement of liabilities and impaired assets, information reporting and assurance, and new forms of taxation. Where the technical issues extend beyond an accountant's reach, working with other experts is already recognised as good practice.

THE ACA QUALIFICATION AND TECHNOLOGY

Changes in technology have automated many routine aspects of accountancy. But with changes in technology also come complexity and risk. Accountants need to adapt and develop new skills to manage these changes.

While there are many new technology capabilities that have broad application across the business and consumer environment, there are several trends that have the greatest potential to transform the accountancy profession (ABCD): **A**rtificial intelligence, **A**utomation, **B**lockchain, **C**yber security, **C**loud computing, and **D**ata and **D**igital Transformation.

These and other innovations are likely to have a significant impact on the way that accountants access information, transact and manage business finances. Technology tools can provide information more quickly and often more accurately than humans, but they cannot replicate human intelligence, critical thinking and quality decision making, or effective communication of the output of analysis. Chartered accountants continue to hold key roles such as validating the source of the data, evaluating the risks, interpreting and analysing the outputs, and ensuring the tools support effective management of the organisation. As automation continues to expand understanding the interconnectivity between systems will be fundamental.

As routine and compliance work reduces, there is greater focus on the development of skills which equip professionals to work with the outputs of automated processes, with other specialists, and in a changing world. The skill set needed by accountants is changing as technological advances are made; it's the ability to adapt and rapidly respond to these changes that will be key.

We believe that skills such as analysis, interpretation, professional scepticism, communication, collaboration, adaptability, resilience and commerciality are essential for tomorrow's business leaders; these are embedded throughout the ACA exams and professional skills framework.

© ICAEW 2026

THE ACA QUALIFICATION AND ETHICS

Culture and values are central to long-term success. How a business adopts an ethical approach towards its staff, shareholders, customers, regulators and other stakeholders, as well as within its own operations, has a bigger impact than any performance measure or operational improvement.

Demonstrating a clear commitment to ethical behaviour is one of the main drivers of better performance; it delivers an advantage when recruiting, it adds value to a brand, and it instils trust and confidence in partners, suppliers and others that the organisation is well run and resilient.

Achieving that is not a matter of simple knowledge. Few ethical challenges will have simple right or wrong responses. They require technical understanding, critical appraisal, and application of professional scepticism and judgement with skilful handling. Accountants must have the necessary skills to apply professional judgement, have a curious mindset and take into account what has been learnt as an ACA student about their ethical responsibilities as a chartered accountant.

There will be unique ethical challenges throughout any chartered accountant's process of learning and career. They serve a variety of masters: senior management, external stakeholders, regulators and above all the public interest responsibility of their profession. Because of the rigorous and effective training and continual professional development as part of their lifelong learning, chartered accountants can speak up and take a lead. None of this can happen without one critical element: professionalism. That goes beyond merely knowing the Code of Ethics; it means embodying the right behaviours and values and having the ability and willingness to push back against those who might compromise the integrity of the business.

Ethics and professionalism are embedded throughout the ACA qualification, from understanding and applying knowledge of the Code of Ethics and developing safeguards, to adopting a curious mindset and applying professional judgement. We build ethical and professional confidence in our qualification as it prioritises not only technical knowledge of the ethical framework but also challenges accountants with scenarios that accurately reflect the ethical dilemmas a chartered accountant may face in business.

ACA components

SPECIALISED LEARNING

Our 14 business, finance and accountancy modules cover the core technical knowledge and application of skills for all ICAEW Chartered Accountants. However, we recognise each student's unique journey to membership and have therefore built Specialised Learning into the core of the ACA qualification.

Specialised Learning provides tailored learning opportunities and therefore forms a key element of the ACA qualification. Students will have access to an e-learning platform that hosts a wide range of content relevant to students working across different sectors and specialisms. This content will be brought to life in a practical and engaging way and will cover both technical and non-technical skills.

Students will need to complete a minimum of 30 units of Specialised Learning. Each unit will roughly equate to an hour of learning. By having access to different content students and employers will be able to personalise the experience to fit with a student's individual learning needs and role.

PROFESSIONAL SKILLS AND EXPERIENCE

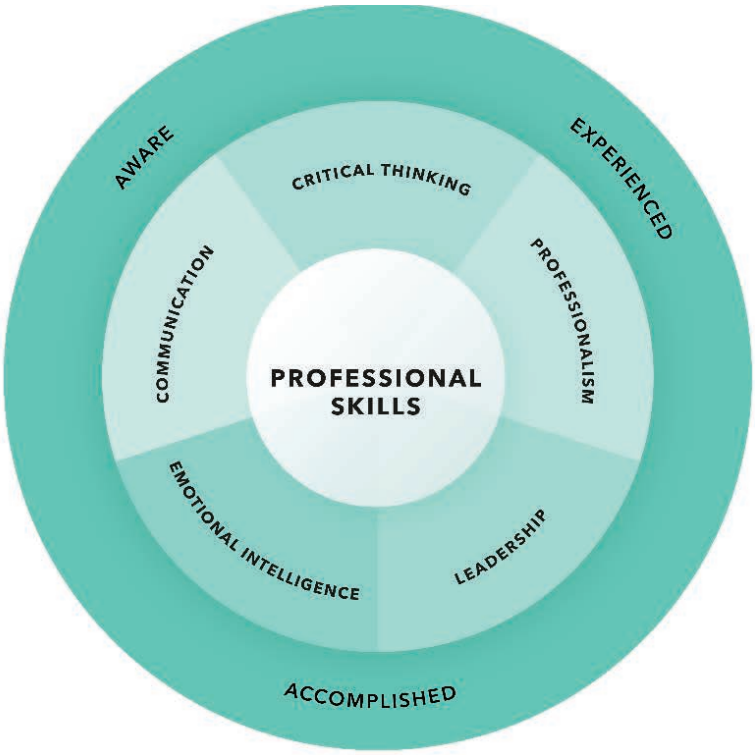
The ACA features 25 professional skills split across five key competency areas. A three-stage proficiency model will guide students to develop their unique skills portfolio.

Professional development prepares students to successfully handle a variety of different situations that they encounter throughout their career. Building in professional development as part of the ACA qualification recognises that this is the start of a student's lifelong learning journey.

The skills development framework is set around core competencies and skills. These recognise that clear effective communication is at the heart of all that we do, and is balanced with developing critical thinkers, who are resilient and inclusive and are underpinned by professionalism. We want to develop leaders who can be authentic and remain true to their personal values.

© ICAEW 2026

With diversity and inclusion being one of our key strategic pillars it is important that these skills encompass collaboration and inclusion whilst celebrating diversity rather than having a 'one size fits all model'.



WORK EXPERIENCE

Professional work experience is undertaken as part of a training agreement with an authorised training employer or principal. Students need to complete at least 450 days, which normally takes between three and five years. The knowledge, skills and experience they gain as part of their training are invaluable, giving them the opportunity to put what they're learning into practice.

Student professional work experience should:

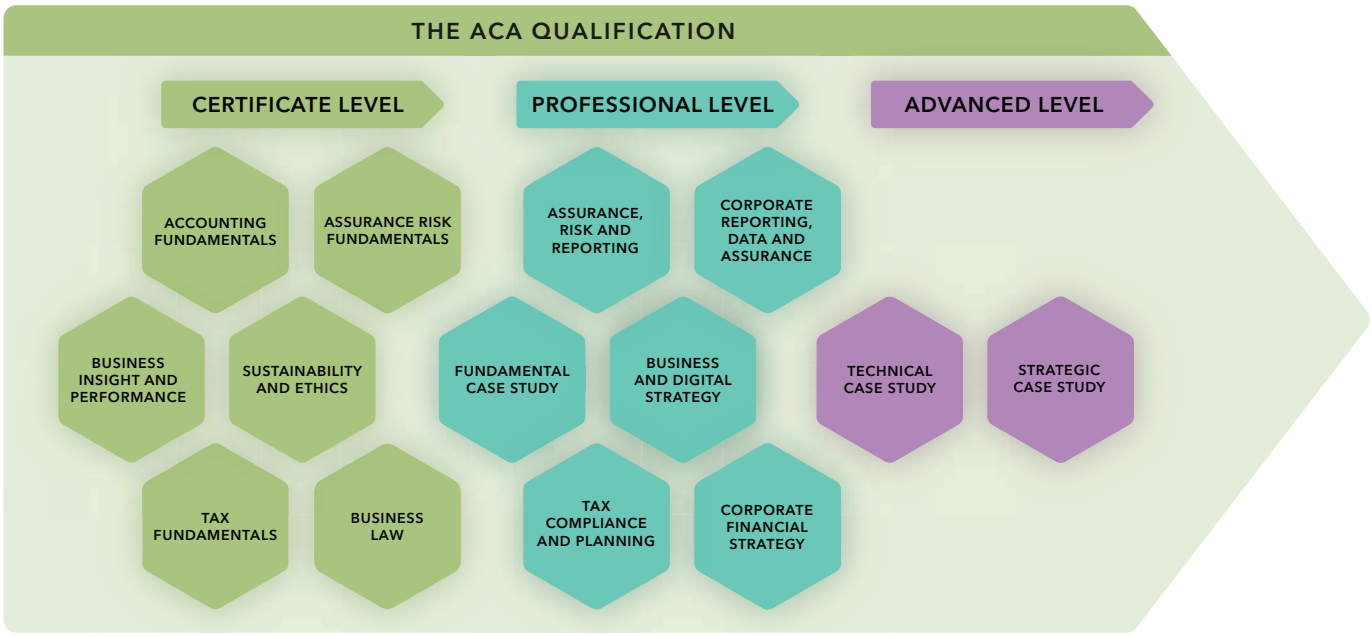
- include responsibility levels that increase in depth and scope as the student progresses through their training;
- be recorded throughout their training agreement; and
- expose them to as many different practical assignments, finance functions and/or clients in as many different sectors as possible.

© ICAEW 2026

14 BUSINESS, FINANCE AND ACCOUNTANCY EXAMS

Students gain in-depth knowledge across a broad range of topics in business, finance and accountancy. The exams are designed to complement their professional work experience, so they constantly progress through the qualification providing an integrated learning experience.

There are 14 modules over three levels – Certificate, Professional and Advanced. Flexibility allows each student journey to membership to be unique to them.



CERTIFICATE LEVEL

There are six exams at this level that introduce the fundamentals of business, finance and accountancy. Students may be eligible for credit for some exams if they have studied a qualification we recognise. Find out more at **icaew.com/cpl**.

The Certificate Level exams are either 1.5 or 2 hours long, have a 55% pass mark and can be sat in any order throughout the year.

PROFESSIONAL LEVEL

The next six exams build on the fundamentals and test students' understanding and ability to use technical knowledge in real-life scenarios. The exams can be taken in March, June, September and December.

The Professional Level exams are 2.5 hours long, except for Assurance, Risk and Reporting and Tax Compliance and Planning which are 3 hours long. Each exam has a 55% pass mark.

Permitted texts are available for Assurance, Risk and Reporting, Corporate Reporting, Data and Assurance and Tax Compliance and Planning. Fundamental Case Study is open book.

The Professional Level exams are flexible and can be taken in any order to fit with a student's day-to-day professional experience. The Fundamental Case Study aims to bring together technical knowledge gained by studying the Certificate Level material with professional work experience and professional skills and can therefore be seen as an excellent transition from Certificate to Professional Level. Equally students are likely to find the Corporate Reporting, Data and Assurance and Business and Digital Strategy exams in particular as helpful stepping stones to progress to the Advanced Level.

ADVANCED LEVEL

There are two case studies at Advanced Level that test students' understanding and strategic decision making at a senior level. The case studies present real-life scenarios, with increased complexity from the Professional Level exams. Advanced Level challenges students' ability to problem solve, apply critical thinking, identify ethical implications and provide effective solutions.

The Advanced Level exams can be taken in July and November. They are fully open book,

© ICAEW 2026

so they replicate a real-life scenario where all the resources are at their fingertips and include advance information.

Technical Case Study and Strategic Case Study are both 4 hours long. Each has a 50% pass mark.

For more information, guidance and support on exams, visit the exam resources area on our website at **icaew.com/studyresources**.

Skills progression through the ACA exams

Specialised Learning is an integrated component of the ACA qualification, with a core competency framework setting out the skills essential to equip ICAEW Chartered Accountants of tomorrow. A subsection of these skills are embedded in the 14 exams and assessed in exams. The following skills are present throughout the 14 business, finance and accountancy exams:

SKILLS	OVERALL
Assimilating and using information	Understand a business or accounting situation, prioritise by determining key drivers, issues and requirements and identify and use relevant information.
Structuring problems and solutions	Structure information from various sources into suitable formats for analysis and provide creative and pragmatic solutions in a business environment.
Applying judgement	Apply professional scepticism and critical thinking to identify faults, gaps, inconsistencies and interactions from a range of relevant information sources and relate issues to a business environment.
Concluding, recommending and communicating	Apply technical knowledge, skills and experience to support reasoning and conclusion and formulate opinions, advice, plans, solutions, options and reservations based on valid evidence and communicate clearly in a manner suitable for the recipient.

The level of skill required to pass each exam increases as ACA trainees progress upwards through each Level of the ACA exams. The skills progression embedded throughout the ACA qualification ensures ACA trainees develop the knowledge and skills to successfully operate in the modern workplace and which are expected by today's forward-thinking employers.

Skills	Certificate Level		Professional Level		Advanced Level
	Assurance and Risk Fundamentals, Business Law, Sustainability and Ethics	Accounting Fundamentals, Business Insight and Performance, Tax Fundamentals	Fundamental Case Study, Assurance, Risk and Reporting, Corporate Financial Strategy	Business and Digital Strategy, Corporate Reporting, Data and Assurance, Tax Compliance and Planning	Technical Case Study, Strategic Case Study
Assimilating and using information					
Understanding the situation and requirements	Objective testing	Objective testing and simple scenarios	Scenarios		Complex business scenarios
Identifying and using relevant information	Information as provided		Single information source provided	Several information sources provided	Multiple information sources provided
Identifying and prioritising key issues	Issues given		Issues included in scenarios		Issues included in complex scenarios
Structuring problems and solutions					
Structuring data	Specified techniques		Specified techniques	Extends to techniques inferred by nature of problem	Techniques inferred by the nature of problem
Developing solutions	Highly specified tasks	Specified problems	Specified problems		Defined output with implicit, although unspecified problems
Applying judgement					
Applying professional scepticism and critical thinking	Objective testing		Specified requirement in simple scenario	Specified requirement in scenario	Specified requirement in complex scenario
Relating issues to the broader business environment, including ethical issues	Objective testing	Objective testing and issues in simple scenarios	Issues in scenarios		Issues in complex scenarios
Concluding, recommending and communicating					
Concluding and recommending	Objective testing Not assessed		Specified conclusions and recommendations in simple scenarios		Conclusions and reasoned recommendations supported by own evidence
Communicating	Prescribed exam format		Exam requirements, including some professional presentation		Professional presentations and reports including reasoned recommendations

PROFESSIONAL SKILLS ASSESSED IN THE ACA EXAMS

ASSIMILATING AND USING INFORMATION

Understand the situation and the requirements:	Identify and use relevant information:	Identify and prioritise key issues and stay on task:
• Demonstrate understanding of the business context. • Recognise new and complex ideas within a scenario. • Identify the needs of customers and clients. • Explain different stakeholder perspectives and interests. • Identify risks within a scenario. • Identify elements of uncertainty within a scenario. • Identify ethical issues including public interest and sustainability issues within a scenario.	• Interpret information provided in various formats. • Evaluate the relevance of information provided. • Use multiple information sources. • Filter information provided to identify critical facts. • Identify and interpret information in data analytics software.	• Identify business and financial issues from a scenario. • Prioritise key issues. • Work effectively within time constraints. • Operate to a brief in a given scenario.

STRUCTURING PROBLEMS AND SOLUTIONS

Structure data:	Develop solutions:
• Structure information from various sources into suitable formats for analysis. • Identify any information gaps. • Frame questions to clarify information. • Use a range of data types and sources to inform analysis and decision-making. • Structure and analyse financial and non-financial data to enhance understanding of business issues and their underlying causes. • Present analysis in accordance with instructions and criteria. • Use spreadsheets to assimilate, structure and analyse data.	• Identify and apply relevant technical knowledge and skills to analyse a specific problem. • Use structured information to identify evidence-based solutions. • Identify creative and pragmatic solutions in a business environment. • Identify opportunities to add value. • Identify and anticipate problems that may result from a decision. • Identify a range of possible solutions based on analysis. • Identify ethical dimensions of possible solutions. • Select appropriate courses of action using an ethical framework. • Identify the solution which is the best fit with acceptance criteria and objectives. • Define objectives and acceptance criteria for solutions.

© ICAEW 2026

APPLYING JUDGEMENT

Apply professional scepticism and critical thinking:	Relate issues to the environment:
• Recognise bias and varying quality in data and evidence. • Identify assumptions or faults in arguments. • Identify gaps in evidence. • Identify inconsistencies and contradictory information. • Assess interaction of information from different sources. • Exercise ethical judgement.	• Appreciate when more expert help is required. • Identify related issues in scenarios. • Assess different stakeholder perspectives when evaluating options. • Retain an overview of the business issue or scenario. • Appraise corporate responsibility and sustainability issues. • Appraise the effects of alternative future scenarios. • Appraise ethical, public interest and regulatory issues.

CONCLUDING, RECOMMENDING AND COMMUNICATING

Conclusions:	Recommendations:	Communication:
• Apply technical knowledge to support reasoning and conclusions. • Apply professional experience and evidence to support reasoning. • Use valid and different technical skills to formulate opinions, advice, plans, solutions, options and reservations.	• Present recommendations in accordance with instructions and defined criteria. • Make recommendations in situations where risks and uncertainty exist. • Formulate opinions, advice, recommendations, plans, solutions, options and reservations based on valid evidence. • Make evidence-based recommendations which can be justified by reference to supporting data and other information. • Develop recommendations which combine different technical skills in a practical situation.	• Present a basic or routine memorandum or briefing note in writing in a clear and concise style. • Present analysis and recommendations in accordance with instructions. • Communicate clearly to a specialist or non-specialist audience in a manner suitable for the recipient. • Prepare the advice, report, or notes required in a clear and concise style.

© ICAEW 2026

ACA Syllabus

The ACA syllabus is updated annually. The aim of the annual update is to ensure that the syllabus remains fit for purpose and can include amendments to cater for technical changes, clarification of learning outcomes, inclusion of new areas of knowledge impacting ICAEW Chartered Accountants, and removal of content for subject areas where there is duplication, repetition or content no longer relevant within the qualification. The process includes consultation with all key stakeholder groups and covers the skills, learning outcomes and technical knowledge grids of each module.

This document presents the learning outcomes for each of the ACA exams at Certificate, Professional and Advanced Levels. The learning outcomes in each exam should be read in conjunction with the relevant technical knowledge grids and, where applicable, the skills development grid.

UNDERSTANDING THE SYLLABUS FOR EACH MODULE

Each module has the following syllabus components:

Module aims	These are a series of abilities which trainees will possess once they complete the learning and assessment for this particular module.
Method of assessment	This sets out the length and structure of the exam for each module.
Ethics and professional scepticism	Students are assessed on their understanding of, and reaction to, ethical dilemmas within the context of the subject matter of each module. The application of professional scepticism and critical thinking are a crucial part of the exercise of ethical judgement.
Sustainability	Students are assessed on their understanding of sustainability related issues within the context of the subject matter of each module. Understanding the broader implications of environmental, social and governance issues to organisations and actively using their business skills to analyse how to make the new sustainable economy work for their business.
Specification grid	Each module aim creates a syllabus area of technical and skills-based learning. The specification grid assigns an assessment weighting to each syllabus area, which indicates the proportion of learning represented by each syllabus area in the exam.
Learning outcomes	Detailed statements which identify what the learner will know and be able to do by the end of the module, and which will be demonstrable on passing the exam.
Skills assessed	Each module identifies the specific skills that are assessed and how they are assessed.

© ICAEW 2026

Technical knowledge grids

The technical knowledge grids show the technical knowledge in the disciplines of assurance and audit, business analysis, ethics codes and standards, financial reporting, and taxation covered in the ACA syllabus by module. For each technical area, the level of knowledge required is indicated by a letter from A to D, as follows:

- Level A – thorough knowledge with a solid understanding
- Level B – working knowledge with a broad understanding
- Level C – general knowledge with a basic understanding
- Level D – awareness of the scope of the standard

© ICAEW 2026

Certificate Level

Business Insight and Performance

MODULE AIM

To enable students to prepare essential financial information for the management of a business.

On completion of this module, students will be able to:

- calculate the costs of products and services and use them to determine sales and transfer prices;
- identify appropriate budgeting and forecasting approaches and methods, and prepare budgets;
- calculate differences between actual performance and standards or budgets;
- identify and calculate relevant data for use in management decision making;
- specify the impact on a business of the external environment in which it operates;
- specify key issues in relation to data and its collection, visualisation and analysis, and identify key features, benefits and risks of different technologies; and
- identify and explain ethical issues.

METHOD OF ASSESSMENT

The Business Insight and Performance exam is 2 hours long. 20% of the marks are allocated in one scenario-based question. This will cover a single syllabus area, either: costing and pricing; budgeting and forecasting; performance management; or management decision making. The remaining 80% of the marks are from 32 multiple choice, multi-part multiple choice or multiple response questions. Questions cover the areas of the syllabus in accordance with the weightings set out in the specification grid.

ETHICS AND PROFESSIONAL SCEPTICISM

Ethics is fundamental to the sound provision of management information upon which basis sustainable business decisions can be made. This will form a backdrop to an overall culture of business trust as well as business efficiency. Students will be expected to apply professional scepticism and be able to identify types of data bias and their causes and effects.

SUSTAINABILITY

Knowledge of core sustainability concepts is a requirement for the professional accountant. Students will be expected to understand the over-arching concept of sustainability and why people and planet are strategically important to business. Understanding how the ICAEW chartered accountant can contribute to and help manage sustainability risks, opportunities and regulations (particularly in terms of information flows) is fundamental to understanding the context of the ACA sustainability content.

© ICAEW 2026

SPECIFICATION GRID

This grid shows the relative weightings of subjects within this module and should guide the relative study time spent on each. Over time the marks available in the assessment will equate to the weightings below, while slight variations may occur in individual assessments to enable suitably rigorous questions to be set.

SYLLABUS AREA	WEIGHTING
1 Costing and pricing	20%
2 Budgeting and forecasting	20%
3 Performance management	25%
4 The external environment of business	
5 Management decision making	20%
6 Technology and data analysis	10%
7 Ethics	5%

The following learning outcomes should be read in conjunction with the relevant sections of the technical knowledge grids at the end of this document.

1 COSTING AND PRICING

Students will be able to calculate the costs of products and services and use them to determine sales and transfer prices.

In the assessment, students may be required to:

a. recognise the use of cost information for different purposes;
b. classify costs as fixed, variable, direct or indirect;
c. calculate overhead absorption rates, unit costs and profits/losses using:
   - marginal costing
   - absorption costing and reconcile the differences between the costs and profits/losses obtained;
d. select the most appropriate method of costing for a given product or service;
e. calculate the sales price for a product or service using cost based pricing;
f. specify the impact of the price mechanism on business (including the concept of price elasticity); and
g. calculate transfer prices for sales to internal customers which take account of appropriate costs.

2 BUDGETING AND FORECASTING

Students will be able to identify appropriate budgeting and forecasting approaches and methods, and prepare budgets.

In the assessment, students may be required to:

a. recognise how forecasting techniques (including high/low and time series analysis) help management in budgeting and forecasting and perform calculations using these techniques;
b. identify how data analytics can be used in budgeting and forecasting;
c. identify issues relating to the collection of data and interpretation of data (correlation v causation) for budgeting and forecasting;
d. prepare budgets or extracts therefrom;
e. select the most appropriate of the following budgeting approaches and methods, taking into account their advantages and disadvantages for planning, control and motivation:
   - bottom-up and top-down approaches to generating and managing budgets
   - zero-based and incremental budgeting;
f. prepare a cash budget which highlights the quantity and timing of cash surpluses and deficits;
g. calculate the cash (operating) cycle for a business and understand its significance;
h. identify the constituent elements of working capital and treasury and specify the methods by which each element can be managed to optimise working capital and cash flows taking account of sustainability issues; and
i. recognise how to manage the surpluses and deficits predicted in cash budgets.

© ICAEW 2026

3 PERFORMANCE MANAGEMENT

Students will be able to calculate differences between actual performance and standards or budgets.

In the assessment, students may be required to:

a. calculate differences between actual performance and standards or budgets in terms of price and volume effects and identify possible reasons for those differences.

4 THE EXTERNAL ENVIRONMENT OF BUSINESS

Students will be able to specify the impact on a business of the external environment in which it operates.

In the assessment, students may be required to:

a. identify the key macro-economic factors that affect businesses; and
b. specify the principal effects of national and international regulation upon businesses.

5 MANAGEMENT DECISION MAKING

Students will be able to identify and calculate relevant data for use in management decision-making, both short and long term.

In the assessment, students may be required to:

a. calculate the breakeven point, contribution and margin of safety for a given product or service;
b. allocate scarce resource to those products or services with the highest contribution per limiting factor;
c. calculate the net present value, internal rate of return, payback period or accounting rate of return for a given project; and
d. identify the advantages and disadvantages of the investment appraisal techniques specified in 5(c) above and outline how sustainability issues can be incorporated into investment appraisal decisions.

6 TECHNOLOGY AND DATA ANALYSIS

Students will be able to specify key issues in relation to data and its collection, visualisation and analysis, and identify key features, benefits and risks of different technologies.

In the assessment, students may be required to:

a. specify the purpose of data, the different types and sources of data and the importance of data comparability;
b. specify principles in relation to the collection and analysis of data, including populations, surveys, presentation of simple frequency distributions, and basic sampling;
c. identify types of error in data and types of data protection for commercially sensitive information and the principles of cyber security and data security;
d. identify issues in relation to the use of spreadsheets, visualisations and interpretation of data in graphs and charts; and
e. identify the effect of digital disruption and technology developments, including those relating to automation, artificial intelligence, machine learning and robotic process automation, on the accountancy profession and business.

7 ETHICS

Students will be able to identify and explain ethical issues.

In the assessment, students may be required to:

a. identify and explain ethical issues relating to the preparation, presentation and interpretation of information for the management of a business; and
b. identify and explain ethical issues in relation to the collection, analysis, visualisation and use of data, including data bias and professional scepticism.

© ICAEW 2026

Technical knowledge

The tables contained in this section show the technical knowledge in the disciplines of financial reporting, audit and assurance, business analysis, ethics and taxation covered in the ACA syllabus by module.

For each individual standard the level of knowledge required in the relevant Certificate and Professional Level module and at the Advanced Level is shown.

The knowledge levels are defined as follows:

LEVEL D

An awareness of the scope of the standard.

LEVEL C

A general knowledge with a basic understanding of the subject matter and training in its application thereof sufficient to identify significant issues and evaluate their potential implications or impact.

LEVEL B

A working knowledge with a broad understanding of the subject matter and a level of experience in the application thereof sufficient to apply the subject matter in straightforward circumstances.

LEVEL A

A thorough knowledge with a solid understanding of the subject matter and experience in the application thereof sufficient to exercise reasonable professional judgement in the application of the subject matter in those circumstances generally encountered by chartered accountants.

KEY TO OTHER SYMBOLS:

→ The knowledge level reached is assumed to be continued.
