TECHNICAL KNOWLEDGE	24

ACA overview

The ICAEW chartered accountancy qualification, the ACA, is one of the most advanced learning and professional development programmes available. Its integrated components provide an in-depth understanding across business, finance and accountancy. Combined, they help build the technical knowledge, professional skills and practical experience needed to become an ICAEW Chartered Accountant.

Each component is designed to complement the other, which means that students can put theory into practice and can understand and apply what they learn to their day-to-day work.

ICAEW constantly reviews the content of the ACA qualification to reflect real life business challenges. Over the next decade, sustainability, technology and ethics will be the three key themes impacting every accountant and business they serve. We work closely with employers, tuition providers, academics and examiners to ensure that the ACA equips the chartered accountants of the future with the skills and knowledge they need to meet these challenges and to be successful. Sustainability, technology and ethics have been integrated throughout the qualification, delivering forward-thinking business leaders ready for the challenges of tomorrow's world.

THE ACA QUALIFICATION AND SUSTAINABILITY

Finance and accounting professionals need to move beyond simply measuring and reporting the impact of climate change, environmental regulation, supply chain pressure and rising energy costs. They must focus on understanding these and other emerging sustainability-related implications, integrating them into financial management and strategic business planning. ICAEW has been at the forefront of this movement over the past decade and has adapted the ACA qualification to reflect that. We see its role as not simply integrating knowledge and understanding the broader implications of environmental, social and governance issues into organisations, but also seeding this thinking into the mindset of our members.

Our syllabus, Specialised Learning and professional skills framework contribute toward creating ICAEW Chartered Accountants who recognise that sustainability is at the core of what they do and are capable of actively using their business skills to analyse how to make the new sustainable economy work for their business.

Sustainability is an integrated element from assurance and corporate reporting to strategic business planning and management reporting, providing transparent information for users. It's an embedded element across the ACA qualification with its beginnings at the newly developed Sustainability and Ethics module at Certificate Level through to the Strategic Case Study at Advanced Level. The new Specialised Learning and professional skills framework provides the opportunity to create and update content rapidly which will be invaluable for sustainability conversations to remain relevant.

There is much that is closely related to the skills and experience of ICAEW Chartered Accountants; for example, the identification and management of risks, corporate governance, compliance with laws and regulations, design and operation of management control systems, measurement of liabilities and impaired assets, information reporting and assurance, and new forms of taxation. Where the technical issues extend beyond an accountant's reach, working with other experts is already recognised as good practice.

THE ACA QUALIFICATION AND TECHNOLOGY

Changes in technology have automated many routine aspects of accountancy. But with changes in technology also come complexity and risk. Accountants need to adapt and develop new skills to manage these changes.

While there are many new technology capabilities that have broad application across the business and consumer environment, there are several trends that have the greatest potential to transform the accountancy profession (ABCD): **A**rtificial intelligence, **A**utomation, **B**lockchain, **C**yber security, **C**loud computing, and **D**ata and **D**igital Transformation.

These and other innovations are likely to have a significant impact on the way that accountants access information, transact and manage business finances. Technology tools can provide information more quickly and often more accurately than humans, but they cannot replicate human intelligence, critical thinking and quality decision making, or effective communication of the output of analysis. Chartered accountants continue to hold key roles such as validating the source of the data, evaluating the risks, interpreting and analysing the outputs, and ensuring the tools support effective management of the organisation. As automation continues to expand understanding the interconnectivity between systems will be fundamental.

As routine and compliance work reduces, there is greater focus on the development of skills which equip professionals to work with the outputs of automated processes, with other specialists, and in a changing world. The skill set needed by accountants is changing as technological advances are made; it's the ability to adapt and rapidly respond to these changes that will be key.

We believe that skills such as analysis, interpretation, professional scepticism, communication, collaboration, adaptability, resilience and commerciality are essential for tomorrow's business leaders; these are embedded throughout the ACA exams and professional skills framework.

THE ACA QUALIFICATION AND ETHICS

Culture and values are central to long-term success. How a business adopts an ethical approach towards its staff, shareholders, customers, regulators and other stakeholders, as well as within its own operations, has a bigger impact than any performance measure or operational improvement.

Demonstrating a clear commitment to ethical behaviour is one of the main drivers of better performance; it delivers an advantage when recruiting, it adds value to a brand, and it instils trust and confidence in partners, suppliers and others that the organisation is well run and resilient.

Achieving that is not a matter of simple knowledge. Few ethical challenges will have simple right or wrong responses. They require technical understanding, critical appraisal, and application of professional scepticism and judgement with skilful handling. Accountants must have the necessary skills to apply professional judgement, have a curious mindset and take into account what has been learnt as an ACA student about their ethical responsibilities as a chartered accountant.

There will be unique ethical challenges throughout any chartered accountant's process of learning and career. They serve a variety of masters: senior management, external stakeholders, regulators and above all the public interest responsibility of their profession. Because of the rigorous and effective training and continual professional development as part of their lifelong learning, chartered accountants can speak up and take a lead. None of this can happen without one critical element: professionalism. That goes beyond merely knowing the Code of Ethics; it means embodying the right behaviours and values and having the ability and willingness to push back against those who might compromise the integrity of the business.

Ethics and professionalism are embedded throughout the ACA qualification, from understanding and applying knowledge of the Code of Ethics and developing safeguards, to adopting a curious mindset and applying professional judgement. We build ethical and professional confidence in our qualification as it prioritises not only technical knowledge of the ethical framework but also challenges accountants with scenarios that accurately reflect the ethical dilemmas a chartered accountant may face in business.

ACA components

SPECIALISED LEARNING

Our 14 business, finance and accountancy modules cover the core technical knowledge and application of skills for all ICAEW Chartered Accountants. However, we recognise each student's unique journey to membership and have therefore built Specialised Learning into the core of the ACA qualification.

Specialised Learning provides tailored learning opportunities and therefore forms a key element of the ACA qualification. Students will have access to an e-learning platform that hosts a wide range of content relevant to students working across different sectors and specialisms. This content will be brought to life in a practical and engaging way and will cover both technical and non-technical skills.

Students will need to complete a minimum of 30 units of Specialised Learning. Each unit will roughly equate to an hour of learning. By having access to different content students and employers will be able to personalise the experience to fit with a student's individual learning needs and role.

PROFESSIONAL SKILLS AND EXPERIENCE

The ACA features 25 professional skills split across five key competency areas. A three-stage proficiency model will guide students to develop their unique skills portfolio.

Professional development prepares students to successfully handle a variety of different situations that they encounter throughout their career. Building in professional development as part of the ACA qualification recognises that this is the start of a student's lifelong learning journey.

The skills development framework is set around core competencies and skills. These recognise that clear effective communication is at the heart of all that we do, and is balanced with developing critical thinkers, who are resilient and inclusive and are underpinned by professionalism. We want to develop leaders who can be authentic and remain true to their personal values.

With diversity and inclusion being one of our key strategic pillars it is important that these skills encompass collaboration and inclusion whilst celebrating diversity rather than having a 'one size fits all model'.

WORK EXPERIENCE

Professional work experience is undertaken as part of a training agreement with an authorised training employer or principal. Students need to complete at least 450 days, which normally takes between three and five years. The knowledge, skills and experience they gain as part of their training are invaluable, giving them the opportunity to put what they're learning into practice.

Student professional work experience should:

- include responsibility levels that increase in depth and scope as the student progresses through their training;
- be recorded throughout their training agreement; and
- expose them to as many different practical assignments, finance functions and/or clients in as many different sectors as possible.

14 BUSINESS, FINANCE AND ACCOUNTANCY EXAMS

Students gain in-depth knowledge across a broad range of topics in business, finance and accountancy. The exams are designed to complement their professional work experience, so they constantly progress through the qualification providing an integrated learning experience.

There are 14 modules over three levels - Certificate, Professional and Advanced. Flexibility allows each student journey to membership to be unique to them.

CERTIFICATE LEVEL

There are six exams at this level that introduce the fundamentals of business, finance and accountancy. Students may be eligible for credit for some exams if they have studied a qualification we recognise. Find out more at [icaew.com/cpl](https://www.icaew.com/cpl).

The Certificate Level exams are either 1.5 or 2 hours long, have a 55% pass mark and can be sat in any order throughout the year.

PROFESSIONAL LEVEL

The next six exams build on the fundamentals and test students' understanding and ability to use technical knowledge in real-life scenarios. The exams can be taken in March, June, September and December.

The Professional Level exams are 2.5 hours long, except for Assurance, Risk and Reporting and Tax Compliance and Planning which are 3 hours long. Each exam has a 55% pass mark.

Permitted texts are available for Assurance, Risk and Reporting, Corporate Reporting, Data and Assurance and Tax Compliance and Planning. Fundamental Case Study is open book.

The Professional Level exams are flexible and can be taken in any order to fit with a student's day-to-day professional experience. The Fundamental Case Study aims to bring together technical knowledge gained by studying the Certificate Level material with professional work experience and professional skills and can therefore be seen as an excellent transition from Certificate to Professional Level. Equally students are likely to find the Corporate Reporting, Data and Assurance and Business and Digital Strategy exams in particular as helpful stepping stones to progress to the Advanced Level.

ADVANCED LEVEL

There are two case studies at Advanced Level that test students' understanding and strategic decision making at a senior level. The case studies present real-life scenarios, with increased complexity from the Professional Level exams. Advanced Level challenges students' ability to problem solve, apply critical thinking, identify ethical implications and provide effective solutions.

The Advanced Level exams can be taken in July and November. They are fully open book,

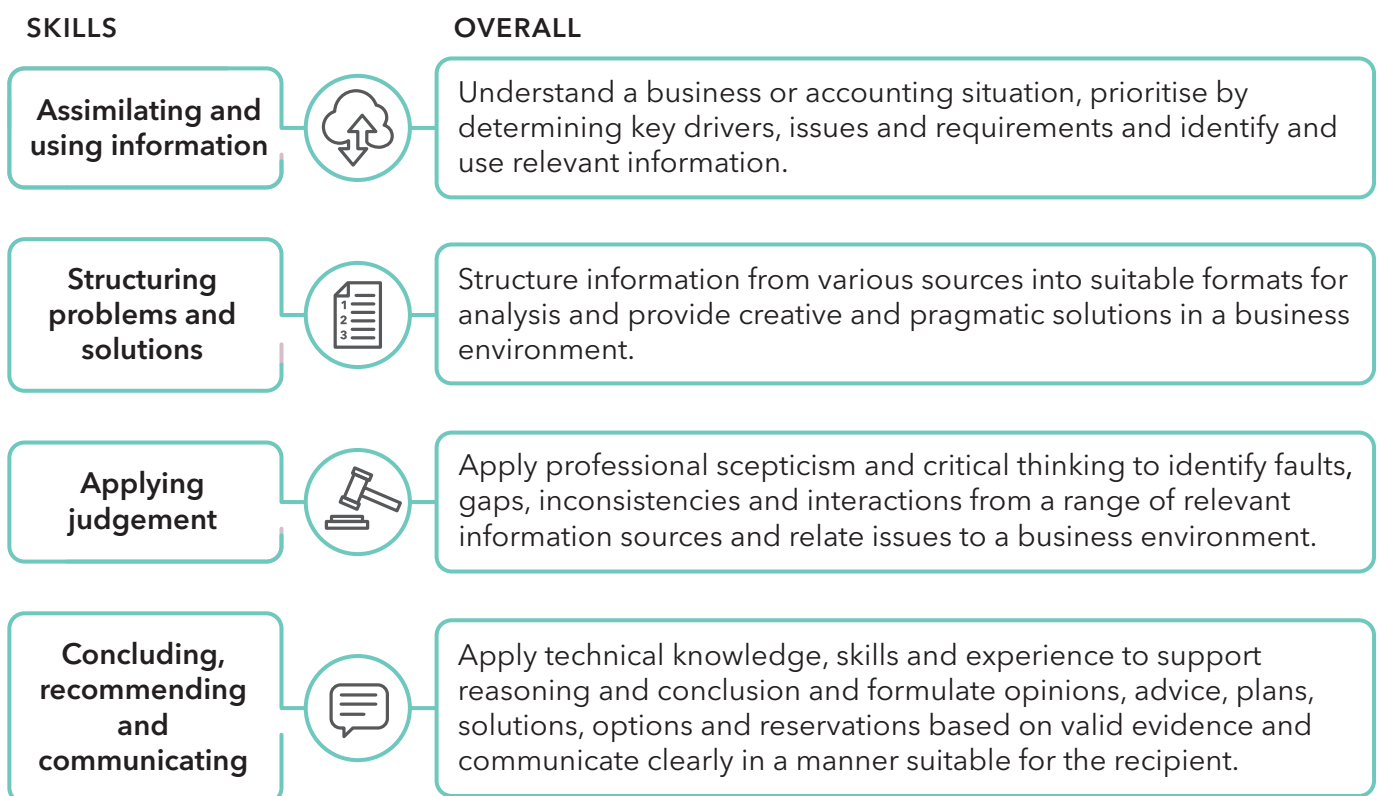

so they replicate a real-life scenario where all the resources are at their fingertips and include advance information.

Technical Case Study and Strategic Case Study are both 4 hours long. Each has a 50% pass mark.

For more information, guidance and support on exams, visit the exam resources area on our website at [icaew.com/studyresources](https://www.icaew.com/studyresources).

Skills progression through the ACA exams

Specialised Learning is an integrated component of the ACA qualification, with a core competency framework setting out the skills essential to equip ICAEW Chartered Accountants of tomorrow. A subsection of these skills are embedded in the 14 exams and assessed in exams. The following skills are present throughout the 14 business, finance and accountancy exams:

The level of skill required to pass each exam increases as ACA trainees progress upwards through each Level of the ACA exams. The skills progression embedded throughout the ACA qualification ensures ACA trainees develop the knowledge and skills to successfully operate in the modern workplace and which are expected by today's forward-thinking employers.

Skills	Certificate Level		Professional Level		Advanced Level
	Assurance and Risk Fundamentals, Business Law, Sustainability and Ethics	Accounting Fundamentals, Business Insight and Performance, Tax Fundamentals	Fundamental Case Study, Assurance, Risk and Reporting, Corporate Financial Strategy	Business and Digital Strategy, Corporate Reporting, Data and Assurance, Tax Compliance and Planning	Technical Case Study, Strategic Case Study

Assimilating and using information

Understanding the situation and requirements	Objective testing	Objective testing and simple scenarios	Scenarios		Complex business scenarios
Identifying and using relevant information	Information as provided		Single information source provided	Several information sources provided	Multiple information sources provided
Identifying and prioritising key issues	Issues given		Issues included in scenarios		Issues included in complex scenarios

Structuring problems and solutions

Structuring data	Specified techniques		Specified techniques	Extends to techniques inferred by nature of problem	Techniques inferred by the nature of problem
Developing solutions	Highly specified tasks	Specified problems	Specified problems		Defined output with implicit, although unspecified problems

Applying judgement

Applying professional scepticism and critical thinking	Objective testing		Specified requirement in simple scenario	Specified requirement in scenario	Specified requirement in complex scenario
Relating issues to the broader business environment, including ethical issues	Objective testing	Objective testing and issues in simple scenarios	Issues in scenarios		Issues in complex scenarios

Concluding, recommending and communicating

Concluding and recommending	Objective testing Not assessed	Specified conclusions and recommendations in simple scenarios		Conclusions and reasoned recommendations supported by own evidence
Communicating	Prescribed exam format		Exam requirements, including some professional presentation	Professional presentations and reports including reasoned recommendations

PROFESSIONAL SKILLS ASSESSED IN THE ACA EXAMS

ASSIMILATING AND USING INFORMATION

Understand the situation and the requirements:	Identify and use relevant information:	Identify and prioritise key issues and stay on task:
<ul style="list-style-type: none">• Demonstrate understanding of the business context.• Recognise new and complex ideas within a scenario.• Identify the needs of customers and clients.• Explain different stakeholder perspectives and interests.• Identify risks within a scenario.• Identify elements of uncertainty within a scenario.• Identify ethical issues including public interest and sustainability issues within a scenario.	<ul style="list-style-type: none">• Interpret information provided in various formats.• Evaluate the relevance of information provided.• Use multiple information sources.• Filter information provided to identify critical facts.• Identify and interpret information in data analytics software.	<ul style="list-style-type: none">• Identify business and financial issues from a scenario.• Prioritise key issues.• Work effectively within time constraints.• Operate to a brief in a given scenario.

STRUCTURING PROBLEMS AND SOLUTIONS

Structure data:	Develop solutions:
<ul style="list-style-type: none">• Structure information from various sources into suitable formats for analysis.• Identify any information gaps.• Frame questions to clarify information.• Use a range of data types and sources to inform analysis and decision-making.• Structure and analyse financial and non-financial data to enhance understanding of business issues and their underlying causes.• Present analysis in accordance with instructions and criteria.• Use spreadsheets to assimilate, structure and analyse data.	<ul style="list-style-type: none">• Identify and apply relevant technical knowledge and skills to analyse a specific problem.• Use structured information to identify evidence-based solutions.• Identify creative and pragmatic solutions in a business environment.• Identify opportunities to add value.• Identify and anticipate problems that may result from a decision.• Identify a range of possible solutions based on analysis.• Identify ethical dimensions of possible solutions.• Select appropriate courses of action using an ethical framework.• Identify the solution which is the best fit with acceptance criteria and objectives.• Define objectives and acceptance criteria for solutions.

APPLYING JUDGEMENT

Apply professional scepticism and critical thinking:	Relate issues to the environment:
<ul style="list-style-type: none"> • Recognise bias and varying quality in data and evidence. • Identify assumptions or faults in arguments. • Identify gaps in evidence. • Identify inconsistencies and contradictory information. • Assess interaction of information from different sources. • Exercise ethical judgement. 	<ul style="list-style-type: none"> • Appreciate when more expert help is required. • Identify related issues in scenarios. • Assess different stakeholder perspectives when evaluating options. • Retain an overview of the business issue or scenario. • Appraise corporate responsibility and sustainability issues. • Appraise the effects of alternative future scenarios. • Appraise ethical, public interest and regulatory issues.

CONCLUDING, RECOMMENDING AND COMMUNICATING

Conclusions:	Recommendations:	Communication:
<ul style="list-style-type: none"> • Apply technical knowledge to support reasoning and conclusions. • Apply professional experience and evidence to support reasoning. • Use valid and different technical skills to formulate opinions, advice, plans, solutions, options and reservations. 	<ul style="list-style-type: none"> • Present recommendations in accordance with instructions and defined criteria. • Make recommendations in situations where risks and uncertainty exist. • Formulate opinions, advice, recommendations, plans, solutions, options and reservations based on valid evidence. • Make evidence-based recommendations which can be justified by reference to supporting data and other information. • Develop recommendations which combine different technical skills in a practical situation. 	<ul style="list-style-type: none"> • Present a basic or routine memorandum or briefing note in writing in a clear and concise style. • Present analysis and recommendations in accordance with instructions. • Communicate clearly to a specialist or non-specialist audience in a manner suitable for the recipient. • Prepare the advice, report, or notes required in a clear and concise style.

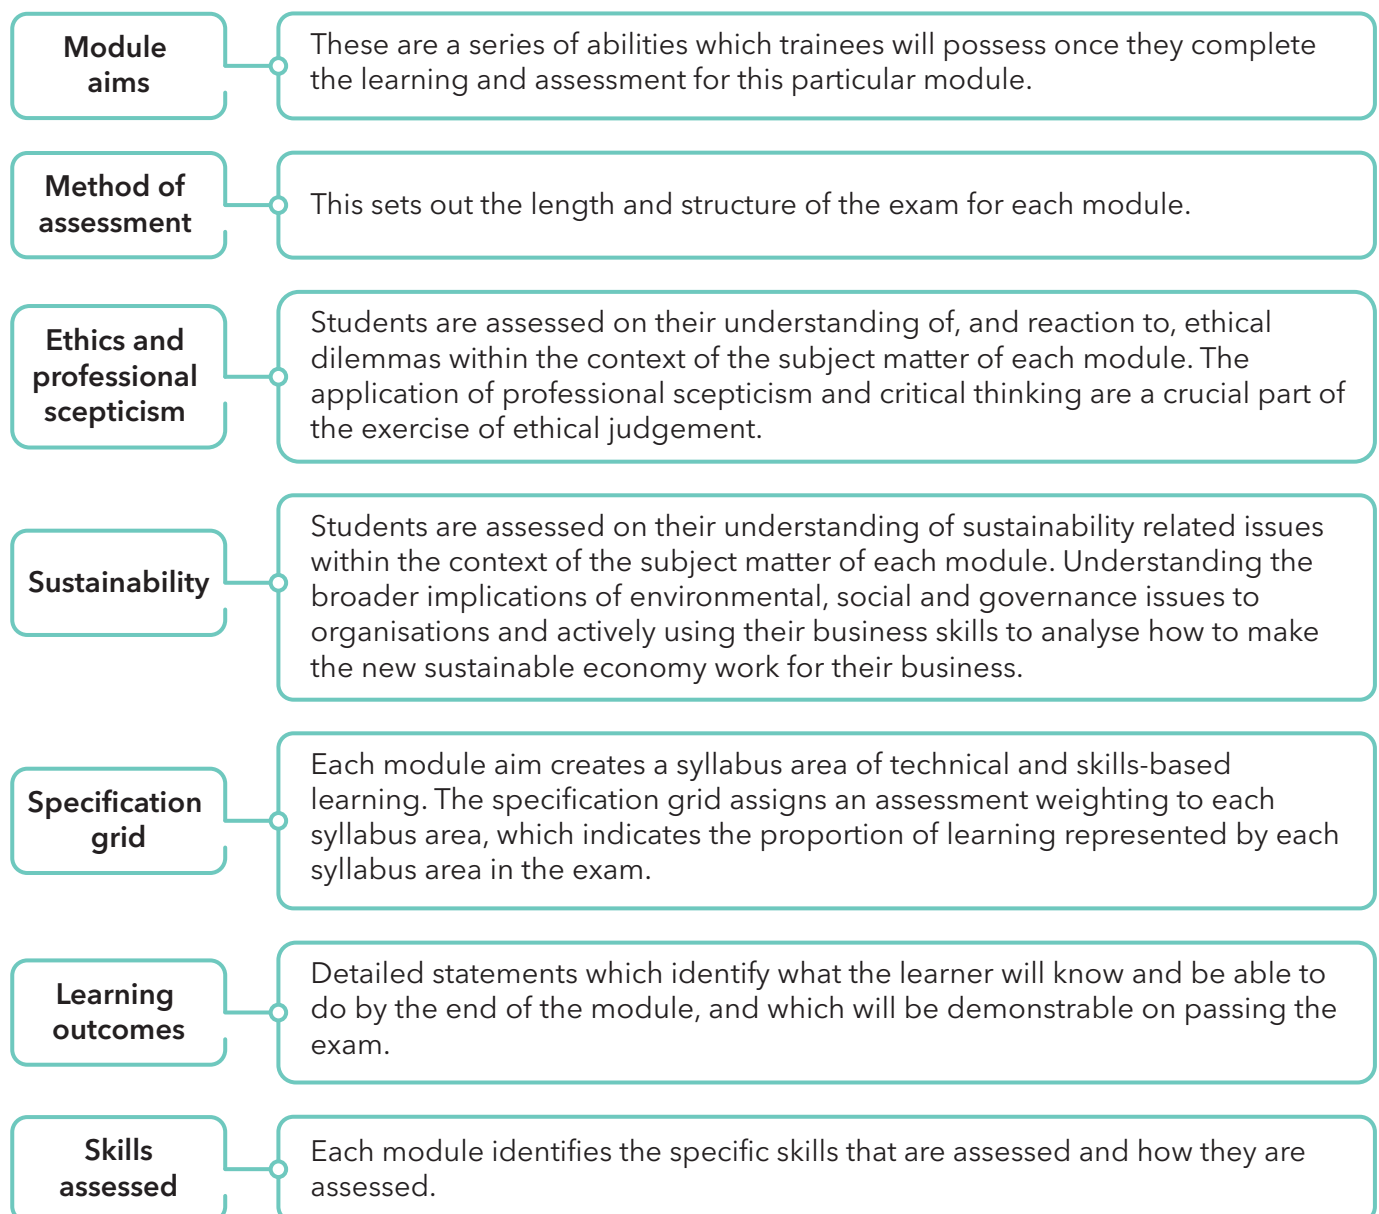

ACA Syllabus

The ACA syllabus is updated annually. The aim of the annual update is to ensure that the syllabus remains fit for purpose and can include amendments to cater for technical changes, clarification of learning outcomes, inclusion of new areas of knowledge impacting ICAEW Chartered Accountants, and removal of content for subject areas where there is duplication, repetition or content no longer relevant within the qualification. The process includes consultation with all key stakeholder groups and covers the skills, learning outcomes and technical knowledge grids of each module.

This document presents the learning outcomes for each of the ACA exams at Certificate, Professional and Advanced Levels. The learning outcomes in each exam should be read in conjunction with the relevant technical knowledge grids and, where applicable, the skills development grid.

UNDERSTANDING THE SYLLABUS FOR EACH MODULE

Each module has the following syllabus components:

Technical knowledge grids

The technical knowledge grids show the technical knowledge in the disciplines of assurance and audit, business analysis, ethics codes and standards, financial reporting, and taxation covered in the ACA syllabus by module. For each technical area, the level of knowledge required is indicated by a letter from A to D, as follows:

- Level A - thorough knowledge with a solid understanding
- Level B - working knowledge with a broad understanding
- Level C - general knowledge with a basic understanding
- Level D - awareness of the scope of the standard

Professional Level

Business and Digital Strategy

MODULE AIM

To provide students with an understanding of how an organisation develops, implements and monitors strategy, including implications for ethics and sustainability.

On completion of this module, students will be able to:

- explain, analyse and evaluate the consequences of an organisation's current strategic direction including objectives, market position, organisational structure and technology developments;
- use data to evaluate the likely consequences of strategic choices and technology developments, and recommend business and digital strategies to meet the objectives of an organisation;
- recommend appropriate methods for an organisation to implement and monitor strategies including strategies for technology and innovation, and demonstrate how data can be used subsequently to measure and monitor strategic performance; and
- explain and evaluate ethical issues and recommend appropriate actions, considering all stakeholders and the public interest.

METHOD OF ASSESSMENT

The Business and Digital Strategy exam is 2.5 hours long. The exam will consist of two scenario-based questions, covering a range of different industries and types of organisation.

SPECIFICATION GRID

This grid shows the relative weightings of subjects within this module and should guide the relative study time spent on each. Over time the marks available in the assessment will equate to the weightings below, while slight variations may occur in individual assessments to enable suitably rigorous questions to be set.

SYLLABUS AREA	WEIGHTING
1 Strategic analysis	30-40%
2 Strategic choice	30-40%
3 Implementation and monitoring of strategy	20-30%
4 Ethics	5-10%

The following learning outcomes should be read in conjunction with the relevant sections of the technical knowledge grids at the end of this document.

Each question will cover one or more syllabus areas.

ETHICS AND PROFESSIONAL SCEPTICISM

Ethics must underpin sound strategic and technological development for a business. Ethical issues and actions will be interwoven in scenario-based questions and may relate to syllabus areas of Strategic analysis, Strategic choice, Implementation and monitoring of strategy. Students are expected to develop their skills to ensure business trust and professional scepticism are paramount.

SUSTAINABILITY

Sustainability and its impact on all stakeholder groups are key considerations in designing and implementing strategy. The application of sustainability knowledge and understanding gained at Certificate Level is a key progression for the ICAEW Chartered Accountant at Professional Level. Students will be expected to understand more advanced sustainability-related concepts and their business implications; for example, the different stakeholder perspectives on sustainability and climate change, and how they relate to sustainability and the concept of Environmental, Social and Governance (ESG). This is an important foundation to considering relevant aspects of sustainability when analysing, choosing and implementing business and digital strategy, and risk management.

1 STRATEGIC ANALYSIS

Students will be able to explain, analyse and evaluate the consequences of an organisation's current strategic direction including objectives, market position and technology developments.

In the assessment, students may be required to:

- a. evaluate an organisation's purpose, in terms of its stated mission, objectives and critical success factors, highlighting omissions, inconsistencies and weaknesses, and considering the different objectives of stakeholders;
- b. explain the functional areas within businesses (marketing, operations/production, procurement, HR, IT and finance) and analyse how the functions support business operations and help the achievement of organisational objectives;
- c. explain the relationship between an organisation's overall strategy and its functional strategies and the nature and purpose of strategic plans, business plans and operational plans, including how a strategic plan is converted into fully-integrated business and operational plans;
- d. analyse the sustainability issues and the environmental, social and governance (ESG) factors which influence the organisation's current strategy, highlighting their likely impact on the success of the organisation;
- e. analyse the external factors which may impact upon an organisation's performance and position, evaluating significant issues in areas such as:
 - natural capital and climate change
 - macroeconomic factors
 - international trade, financial systems and global economic issues
 - government policies
 - its industry and markets, including competition and market failure
 - cultural environment
 - stakeholder, ecosystem and participant impact
 - markets for finance, labour and other resources
 - supply chain factors
 - technology developments;
- f. explain how the needs of different stakeholders in a business (shareholders, employees, suppliers, customers, local community) impact upon it;
- g. explain and evaluate the significance and impact of the internal factors which affect or may influence an organisation's ability to achieve its chosen strategy, including its:
 - current resources
 - product/service portfolio
 - value chain and networks
 - organisational, operational and technological capabilities (including core competences, existing business processes, human capital and workforce flexibility);
- h. analyse an organisation's marketing and competitive strategy, including pricing policy, drawing conclusions using the qualitative and quantitative data available and highlighting relevant issues in terms of their likely impact on the overall strategy of the organisation;
- i. explain the features, benefits and risks of different technologies and evaluate how they impact on an organisation's strategy;
- j. explain and evaluate the risks attached to an organisation's strategy, operations, information security and cyber security, using all relevant qualitative and quantitative data, and considering: attitudes to risk; crisis management; business resilience; business continuity planning; and disaster recovery;
- k. explain and evaluate risk management processes and procedures and show how they operate to mitigate different types of risk;
- l. explain and analyse an organisation's current position and performance using financial and non-financial data from internal and external sources, presented in different formats including visualisations;
- m. explain and evaluate different types of data distributions and data trends using appropriate statistical tools, data analysis and spreadsheets, including consideration of cause and effect and the implications for business risk;
- n. evaluate and interpret data provided, including identifying and explaining the causes and effects of different types of data bias, and applying an appropriate degree of professional scepticism; and

- o. assimilate, structure and analyse transactions and other granular data provided, using spreadsheets.

2 STRATEGIC CHOICE

Students will be able to use data to evaluate the likely consequences of strategic choices and technology developments and recommend strategies to meet the objectives of an organisation.

In the assessment, students may be required to:

- a. explain and demonstrate how to capture and analyse qualitative and quantitative data, presented in different formats, to provide relevant information for decision making at an appropriate level within an organisation;
- b. explain and evaluate how an organisation can use data analytics software to collect, analyse and present data in a variety of formats to aid management decision making;
- c. explain and evaluate the risks attached to proposed courses of action in a given situation, considering all relevant factors and assumptions made, and select and justify strategies for managing risk;
- d. explain and demonstrate how an organisation compares and selects from competing marketing, operational and functional strategies in order to maximise the achievement of its key objectives;
- e. evaluate the sustainability and ESG implications of a strategy or combination of strategies;
- f. select and justify a strategy, or combination of strategies, which will best achieve the organisation's objectives, taking account of known constraints and capabilities, including stakeholder risk preferences and the potential for developing technologies to increase or mitigate risks;
- g. explain and demonstrate how products and services can evolve in the face of developing technologies, consumer demand and industry competition;
- h. explain and demonstrate how to position particular products and services in relevant markets to maximise competitive advantage, including pricing policy, and develop a marketing strategy by selecting, capturing and analysing relevant data;

- i. explain and demonstrate how management information can be used to evaluate an organisation's proposed strategies, including forecasting financial performance and the risk associated with forecasts;
- j. evaluate the value of information and limitations of data, having regard to data variability, data bias and risk; and
- k. assimilate, organise and structure historic and estimated data in appropriate ways, using available statistical tools, data analysis and spreadsheets, to support business decisions.

3 IMPLEMENTATION AND MONITORING OF STRATEGY

Students will be able to recommend appropriate methods for an organisation to implement and monitor strategies, including strategies for technology and innovation, and demonstrate how data can be used subsequently to measure and monitor strategic performance.

In the assessment, students may be required to:

- a. evaluate how an organisation's overall strategy can be achieved by implementing appropriate functional strategies, including the role of the finance function as business partner;
- b. evaluate how strategies for technology and innovation, workforce flexibility, remote and hybrid working and shared service centres can support the organisation's achievement of its overall strategy;
- c. evaluate the nature and characteristics of an organisational structure appropriate to the strategy, taking into account a range of strategic, operational and functional factors;
- d. explain the differences between businesses carried out by sole traders, partnerships, companies, alliances and groups, and evaluate the advantages and disadvantages of each of these structures in achieving an organisation's overall strategy;
- e. explain and analyse the governance and management of an organisation and justify the steps needed to develop its governance and control processes to measure, monitor and manage business activities, meet the needs of its stakeholders, and achieve its strategic objectives;
- f. select and evaluate methods of further developing an organisation which adjust existing strategies or implement new

- strategies to take account of changing position and risk;
- g. explain and evaluate the form and content of an organisation's business plan;
 - h. prepare a business plan, or extracts, which will achieve given or implied objectives;
 - i. explain and demonstrate how qualitative and quantitative data, including forecasts, budgets and other management information presented in a range of formats, can be analysed to measure, monitor and manage the performance of an organisation's projects and strategic units to achieve business objectives;
 - j. explain and demonstrate how organisations can measure and manage the performance of independent and interdependent divisions, including: transfer pricing, motivation and dysfunctional behaviours by divisional management;
 - k. explain and analyse how an organisation can measure, implement and monitor sustainability and ESG policies to achieve an organisation's objectives;
 - l. explain and demonstrate how data can be selected, assimilated, structured and analysed using spreadsheets to provide management with information to monitor or modify strategic or operating decisions, having regard to data variability, data bias and risk, and applying an appropriate degree of professional scepticism;
 - m. explain and evaluate how an organisation can select, capture, analyse and use data, including big data, to provide management with information that enables it to implement, monitor and modify a strategy and to create or sustain competitive advantage; and
 - n. explain and justify the key issues which should be addressed by the management of an organisation during the planning and implementation of change.

4 ETHICS

Students will be able to explain and evaluate ethical issues and recommend appropriate actions, considering all stakeholders and the public interest.

In the assessment, students may be required to:

- a. explain and evaluate the ethical and business trust factors to be considered in determining the scope and nature of an organisation's objectives and its strategic analysis, giving appropriate consideration to the legitimate interests of all stakeholder groups and the public interest;
- b. evaluate the ethical implications of an organisation's strategies and operations for the organisation and for individuals, including the accountant in business and others;
- c. evaluate the ethical implications of the application of technologies and the selection, capture, analysis and use of data;
- d. explain and evaluate the ethical, sustainability, ESG and public interest implications of how an organisation chooses to implement and modify its strategies, suggesting appropriate courses of action to resolve ethical dilemmas that may arise; and
- e. apply appropriate degrees of professional scepticism, professional judgement and challenge in evaluating the extent to which behaviours are ethical.

SKILLS ASSESSED

ASSIMILATING AND USING INFORMATION

Understand the situation and the requirements:	Identify and use relevant information:	Identify and prioritise key issues and stay on task:
<ul style="list-style-type: none">• Demonstrate understanding of the business context.• Recognise new and complex ideas within a scenario.• Identify and explain the needs of customers and clients.• Explain different stakeholder perspectives and interests.• Identify and evaluate risks within a scenario.• Identify and evaluate elements of uncertainty within a scenario.• Identify and explain ethical issues including public interest and sustainability issues within a scenario.	<ul style="list-style-type: none">• Interpret information provided in various formats.• Evaluate the relevance of information provided.• Filter information provided to identify critical facts.	<ul style="list-style-type: none">• Identify and explain business and financial issues from a scenario.• Prioritise key issues.• Work effectively within time constraints.• Operate to a brief in a given scenario.

HOW SKILLS ARE ASSESSED:

Students may be required to:

- understand key information from the scenario provided;
 - understand the context of the scenario in terms of type of business, industry and wider context;
 - recognise key ethical issues for an accountant undertaking work in accounting and reporting; and
 - recognise specific issues that may arise in the context of the situation described.
-

STRUCTURING PROBLEMS AND SOLUTIONS

Structure data:	Develop solutions:
<ul style="list-style-type: none">• Use spreadsheets to assimilate, structure and analyse data.• Structure information from various sources into suitable formats for analysis.• Identify any information gaps and appraise their significance.• Frame questions to clarify information.• Use a range of data types and sources to inform analysis and decision making.• Structure and analyse financial and non-financial data to enhance understanding of business issues and their underlying causes.• Present analysis in accordance with instructions and criteria.	<ul style="list-style-type: none">• Identify and apply relevant technical knowledge and skills to analyse a specific problem.• Use structured information to identify evidence-based solutions.• Identify and evaluate creative and pragmatic solutions in a business environment.• Identify and explain opportunities to add value.• Identify and evaluate problems that may result from a decision.• Identify and evaluate a range of possible solutions based on analysis.• Identify and explain ethical dimensions of possible solutions.• Select appropriate courses of action using an ethical framework.• Identify and evaluate the solution which is the best fit with acceptance criteria and objectives.• Define objectives and acceptance criteria for solutions.

HOW SKILLS ARE ASSESSED:

Students may be required to:

- identify and use information, including data visualisations, to define key business issues;
 - demonstrate understanding of the business, its strategy, industry and wider context;
 - demonstrate the impact of ethics on the objectives and methods of an organisation;
 - identify and explain the ethical and sustainability implications of strategic proposals;
 - demonstrate relevant technical knowledge;
 - perform appropriate analysis of numerical data using spreadsheets and demonstrate an understanding of what is relevant; and
 - use data analysis to develop and illustrate an answer.
-

APPLYING JUDGEMENT

Apply professional scepticism and critical thinking:	Relate issues to the environment:
<ul style="list-style-type: none">• Recognise and evaluate bias and varying quality in data and evidence.• Identify and appraise assumptions or faults in arguments.• Identify and evaluate gaps in evidence.• Identify and appraise inconsistencies and contradictory information.• Assess interaction of information from different sources.• Exercise ethical judgement.	<ul style="list-style-type: none">• Appreciate when more expert help is required.• Identify and explain related issues in scenarios.• Assess different stakeholder perspectives when evaluating options.• Retain an overview of the business issue or scenario.• Appraise corporate responsibility and sustainability issues.• Appraise the effects of alternative future scenarios.• Appraise ethical, public interest and regulatory issues.

HOW SKILLS ARE ASSESSED:

Students may be required to:

- evaluate the impact of a business proposal on an entity;
 - assess the reliability, accuracy and limitations of any analysis performed;
 - be able to produce arguments integrating numerical and descriptive analysis;
 - prioritise the issues facing an entity;
 - identify and appraise links and relationships between different issues affecting an entity and use these to establish priorities;
 - evaluate options for an organisation, taking into account its stakeholders, objectives, priorities, available resources and ethical obligations; and
 - provide reasons for the rejection of alternatives.
-

CONCLUDING, RECOMMENDING AND COMMUNICATING

Conclusions:	Recommendations:	Communication:
<ul style="list-style-type: none">• Apply technical knowledge to support reasoning and conclusions.• Apply professional experience and evidence to support reasoning.• Use valid and different technical skills to formulate opinions, advice, plans, solutions, options and reservations.	<ul style="list-style-type: none">• Present recommendations in accordance with instructions and defined criteria.• Make recommendations in situations where risks and uncertainty exist.• Formulate opinions, advice, recommendations, plans, solutions, options and reservations based on valid evidence.• Make evidence-based recommendations which can be justified by reference to supporting data and other information.• Develop recommendations which combine different technical skills in a practical situation.	<ul style="list-style-type: none">• Present a basic or routine memorandum or briefing note in writing in a clear and concise style.• Present analysis and recommendations in accordance with instructions.• Communicate clearly to a specialist or non-specialist audience in a manner suitable for the recipient.• Prepare the advice, report or notes required in a clear and concise style.

HOW SKILLS ARE ASSESSED:

Students may be required to:

- draw realistic conclusions from an analysis of data and the information provided;
 - prepare a report or memorandum structured according to the requirements of the scenario, with appropriate context;
 - provide reasoned advice based on an understanding of the business and the relevant scenario, including an assessment of possible alternatives;
 - recommend suitable courses of action in a given situation; and
 - identify and evaluate risks and outline reservations about the advice.
-

Technical knowledge

The tables contained in this section show the technical knowledge in the disciplines of financial reporting, audit and assurance, business analysis, ethics and taxation covered in the ACA syllabus by module.

For each individual standard the level of knowledge required in the relevant Certificate and Professional Level module and at the Advanced Level is shown.

The knowledge levels are defined as follows:

LEVEL D

An awareness of the scope of the standard.

LEVEL C

A general knowledge with a basic understanding of the subject matter and training in its application thereof sufficient to identify significant issues and evaluate their potential implications or impact.

LEVEL B

A working knowledge with a broad understanding of the subject matter and a level of experience in the application thereof sufficient to apply the subject matter in straightforward circumstances.

LEVEL A

A thorough knowledge with a solid understanding of the subject matter and experience in the application thereof sufficient to exercise reasonable professional judgement in the application of the subject matter in those circumstances generally encountered by chartered accountants.

KEY TO OTHER SYMBOLS:

→ The knowledge level reached is assumed to be continued.
