11	Other Business Management functionality	

Ref	Requirement	Response	
1.	INTRODUCTION AND PROLOGUE	response	
Introduction			
1.01	The suitability of software for each particular user will always		
	be dependent upon that user's individual requirements.		
	These requirements should therefore always be fully		
	considered before software is acquired. The quality of the		
	software developers or suppliers should also be considered at		
	the onset.		
1.02	Fundamentally, good software should:		
1.02	Be capable of supporting the functions for which it was		
	designed.		
	Provide facilities to ensure the completeness, accuracy,		
	confidentiality and continued integrity of these functions.		
	Be effectively supported and maintained.		
	It is also desirable that good software should:		
	5. Be easy to learn, understand and operate.		
	Make best practical use of available resources.		
	Accommodate limited changes to reflect specific user		
	requirements.		
	It is essential, when software is implemented, for appropriate		
	support and training to be available.		
Approach to			
1.03	The objective is to evaluate a product against a set of criteria		
1.03	developed by the ICAEW to ensure that the software meets		
	the requirements of Good Accounting Software, as laid down		
	in the summary.		
1.04	In order to effectively evaluate the software, a product		
1.04	specialist from the vendor completed the detailed		
	questionnaire and provided it to the ICAEW to examine. The		
	ICAEW's Scheme Technical Manager then reviewed the		
	operation of the various aspects of the software assisted by a		
	member of the vendor's technical staff and checked the		
	answers to confirm their validity. The questions were		
	individually reviewed and commented on and the majority of		
1.05	assessments were confirmed. The Technical Manager discussed the assessment with a		
1.05			
	member of the vendor's staff in order to clarify any points requiring further information. In the event of disagreement		
	between the supplier and the Technical Manager, the		
	Technical Manager's decision was taken as final and the		
1.00	response changed accordingly.		
1.06	The latest version of the software was used throughout the		
1.07	evaluation.		
1.07	When the evaluation had been completed, a draft copy was		
	sent to the ICAEW Scheme Manager for review before		
1.00	completion of the final report.		
1.08	Key acronyms used throughout the review included:		
	- MFA (multi factor authentication)		
	- SSO (single sign on)		
	- CRM (customer relationship management)		
	- MTD (making tax digital)		
Duels • •	- AML (anti money laundering)	ND. This tout has been presided directly built of	
Prologue: M	atters to consider before purchase	NB: This text has been provided directly by the software vendor and	
1.00	Conoral Overview	does not form part of the ICAEW's & RSM's evaluation	
1.09	General Overview:	Acting Office is an all-in-one business management software	
		designed for accounting firms. It streamlines workflows across CRM,	
		AML compliance, bookkeeping, accounts and tax production,	
		Payrolls, VAT returns, document management, telephony, and more	
		— eliminating the need for multiple disconnected systems. Built	
		with modern accounting needs in mind, it supports medium and	
		large size firms with a strong focus on efficiency, data security, and	
4.10	Constitution to a long constitution of the con	automation.	
1.10	Supplier background:	The founders of Acting Office brings extensive experience in both	
		technology and the accounting sector. They have launched multiple	
		fintech ventures within the UK accounting industry, including	
		Capium — a well-known business management software for	
		accounting practices. Development of Acting Office began in 2018,	
		driven by a vision to modernise accounting operations through an	
		integrated and intuitive platform, purpose-built for UK compliance.	
		Our leadership team combines deep domain expertise across	
		accountancy and software development, ensuring the solution is	
		both practical and future-ready.	

Ref	Requirement	Parmanca	
1.11	Product background and suitability for the user:	Response Acting Office was built in collaboration with practicing accountants	
1.11	Froduct background and suitability for the user.	to address the challenges they faced with scattered systems and	
		manual workflows. It is fully aligned with UK accounting standards	
		and compliance frameworks, making it ideal for ICAEW members.	
		The platform supports the day-to-day operations of both small firms	
		and larger practices through its scalable design and customisable	
		features.	
1.12	Add-on modules:		
1.12	Add-off modules:	Acting Office is an all-in-one cloud platform that brings together	
		every function an accounting firm needs under one intelligent	
		system:	
		• Accounts production	
		Corporate & personal tax returns Death against ATT MATT.	
		Bookkeeping, MTD VAT Downell 8, CIC	
		Payroll & CIS CBM 8 allows assuminations	
		CRM & client communications Describes are accounted & DMC	
		Practice management & DMS	
		Proposals, engagement letters and e-signatures	
		Automated workflows	
		Integrated biometric ID checks, bank feeds, calling and email	
		functionality	
		Automation of time-consuming tasks like bookkeeping, accounts &	
		tax production and reviews, payroll, documents filing, deadline	
		tracking & reminders	
1.13	Typical implementation [size]:	Acting Office is typically adopted by medium (£5-15m turnover) and	
		large (£15m+) accounting firms and is built to support complex team	
		structures, multi-office operations, and unlimited number of users.	
		The platform is highly scalable and adaptable, ensuring consistent	
		performance and a seamless user experience as firms grow and	
		evolve.	
1.14	Vertical applications:	Acting Office is tailored for the accounting profession, with particular	
		value for:	
		General practice accountants	
		• Tax advisory firms	
		Bookkeeping firms	
		Payroll service providers	
		It is also suitable for firms serving niche sectors such as contractors,	
		property managers etc.	
1.15	Server flatform and database:	The application is deployed within the Microsoft Azure ecosystem,	
		leveraging its cloud infrastructure, networking, and security	
		capabilities.	
1.16	Client specification required:	It's a cloud platform with the possibility of white labelling. It can be	
		accessed using any modern browser such as the latest version of	
		Google Chrome, Mozilla Firefox, Microsoft Edge, or Safari, with	
		JavaScript and cookies enabled.	
1.17	Partner network:	We are a standalone software firm, marketing and selling our SaaS	
		application on our own, without any partner vendors.	

Ref	Requirement		
2.	ISSUES AND CONCLUSION		
	1330ES AIVE CONCESSION		
Highlighted	issues		
2.01	There are a number of limitations in the product, which while		
	not adversely impacting upon this evaluation may be of		
	importance to some organisations. It is important that any		
	business contemplating the purchase of software reviews the		
	functionality described and limitations therein against its		
	detailed requirements. Attention is drawn in particular to the		
	following areas where the product, on its own, may not be		
	suitable for businesses with certain requirements:		
	Sultable for Submesses with certain requirements.		
2.02	Findings for considerations by potential customers:	Question reference	
2.02	(See vendor comments against the various Questions)		
2.03	Whilst Acting Office's MFA configuration allows both the use of	3 12 6 27 7 51	
2.03	an authenticator app or a one time passcode (OTP) the user's	3.12, 0.27, 7.31	
	mobile, SMS OTPs are not the most secure method of MFA as		
	they are able to be compromised, and there have been a		
	number of cyber incidents recently arising from the use of SMS		
	based MFA. As such, MFA via authenticator app is strongly		
	preferred.		
	preferred.		
	Acting Office indicates that they plan to include the option for		
	authenticator app—based MFA in their upcoming updates to		
	strengthen security and fully align with best practices.		
	strengthen security and runy angli with best practices.		
2.04	SSO is only available for the website application, not the	3.08, 3.12, 5.50, 6.27	
2.0 .	mobile application. SSO is seen as best practice, as reduces the	3.30, 3.11, 3.30, 3.17	
	risk of security vulnerabilities from weak or reused passwords.		
	non or secondly rame as more real or reason passens as		
2.05	Please note that the tool at time of accreditation currently only	4.27. 5.01	
	supports the English language, and GBP currency. As such, this	1.2.7	
	product may not be suitable for customers who may wish to		
	support clients outside of the UK market.		
2.06		7.55, 8.36, 10.27	
	outlined a development roadmap to enhance the application.		
	Planned improvements include expanded CRM capabilities,		
	enriched employee self-service features within the payroll		
	module as well as introducing more features to its mobile		
	application.		
2.07	Acting Office confirms that their platform is fully customisable	7.03, 7.22, 7.56, 9.01, 11.07, 11.14	
	to meet specific organisational needs.		
	For requirements that go beyond the standard admin		
	configuration options, support tickets can be submitted to		
	AO's technical team for assistance or incorporated into the		
	initial configuration of the platform. This includes		
	customisations related to:		
	- tailored notification settings		
	- role-based access controls		
	- timesheet approval workflows		
	- client portal features		
	and other specialised functionalities.		
Evaluation of			
2.08	For the specific use-cases in support of assisting accountancy		
	firms to make effective use of business management software,		
	for which the product is designed, the solution appears to		
	meet this criteria. It continues to be actively developed and		
	enhanced.		
	Members should be aware of the limitations of the solution as		
	above, and fully understand the role that it can play in helping		
	manage their compliance needs.		
	* NOTE THAT THE QUESTIONNAIRE RELATES TO THE		
	SOFTWARE PRODUCT AND NOT ANY SUPPLEMENTARY		
	SERVICES PROVIDED BY THE SUPPLIER TO THE ACCOUNTANCY		
	FIRM USING THAT PRODUCT *		
Disclaimers			

Requirement
Any organisation considering the purchase of this software
should consider their requirements in the light of proposals
from the software supplier or its dealers and potential
suppliers of other similarly specified products. Whilst the
contents of this document are presented in good faith, neither
ICAEW, nor the ICAEW's Technical Manager (RSM UK
Consulting LLP or any party nominated by the ICAEW to
perform this role on the ICAEW's behalf) will accept liability for
actions taken as a result of comments made herein. The
decision to purchase software resides entirely with the
organisation.

Ref	Requirement	Response	Reviewer Comments
3.	ACCESS AND SECURITY		
3.01	What security features are included to control access to the application?	The Acting Office software includes a robust set of security features to control and manage access effectively. User authentication is enforced through secure login credentials, and optionally, two-factor authentication (2FA) can be implemented to add an extra layer of protection. Role-based access control (RBAC) ensures that users can only access the modules and data relevant to their role, such as admin, manager, or viewer, while granular permissions further refine what actions each role can perform. Session management features like auto logout, secure token handling, and device-based restrictions help prevent unauthorized access. Additionally, all data is encrypted both in transit and at rest using industry-standard protocols, and sensitive information can be masked or encrypted at the field level. An audit trail system tracks all key user activities, including login history and data changes, providing transparency and accountability. Administrative users are empowered with tools to manage roles, reset passwords, and control access in real time. These measures together ensure that access to the application is tightly controlled and continuously monitored.	Noted
3.02	Can access to functions be managed via a permissions matrix so users can only see (in menus and other links) and access those areas they are authorised to access?	Yes, Acting Office can manage access to functions using a permissions matrix, which is a structured and scalable way to control user access across the application. Using this approach, each user role or group is mapped to a set of specific permissions, which determine what menus, features, pages, or even actions (like view, edit, delete, approve) the user can access.	Noted
3.03	Is this access to the application managed by: Individual user profiles? - User groups or job roles?		Noted
3.04	Can a report be produced detailing all current users, their user	Yes, Acting Office can produce a comprehensive report listing all current	Noted
3.05	groups if relevant, and their authority levels and/or access rights? If menus can be tailored does the system limit the display of menu options to those for which permission has been granted for each user?	users along with their assigned user groups or roles and their respective authority levels or access rights. This report typically includes details such as the user's name or ID, login information, the roles or groups they belong to, and a clear outline of their permissions within the system. It may also show the user's status (active, inactive, or locked) and optionally include last login timestamps for audit purposes. Such a report is valuable for security reviews, compliance audits, and managing user privileges effectively. It can usually be exported in common formats like CSV, Excel, or PDF, and can be filtered or customized based on roles, departments, or access levels to meet specific administrative needs. Yes, the menus can be tailored in Acting Office. The system ensures that each user only sees the menu options and navigation links for which they have been granted permission. This means that unauthorised or restricted functions are completely hidden from the user's view, preventing any confusion or accidental access attempts. By dynamically adjusting the visible menus based on the user's assigned roles and permissions, the system not only enhances security by enforcing the principle of least privilege but also improves the user experience by presenting a clean, relevant interface tailored to each user's responsibilities.	
3.06	Does security allow for access to be limited to: - Read only? - Read/write? - Read/amend/delete?	Yes, the access can be limited and restricted to Read only, read & write and read/amend and delete based on the user rights and permissions that have been provided within the system.	Noted
3.07	If data can be accessed by separate reporting facilities, such as ODBC or an external report writer, is the user access security control applied?	Yes, each user authenticates with their own username/password or single sign-on (SSO), and the reporting tool passes these credentials to the application or directly to the database. The system enforces role-based access control (RBAC), ensuring that users only see the data they are permitted to access. Row-level, column-level, or object-level security defined in the core system applies consistently, so for example, a team manager running a report will only see data for their assigned region, just as they would within the main application.	Noted
3.08	Does the system security integrate with Microsoft's Active Directory or other tools that provide a single sign-on?	Yes, SSO is for website version only, not available on mobile Apps. Refer to 3.12 & 6.27 for more details for SSO.	Noted. SSO is only available for the website
			application, not the mobile application. See conclusion point

Ref	Requirement	Response	Reviewer Comments
	Does the system provide multi-factor authentication (MFA)?	Yes, Refer to 3.12 & 6.27 for more details for MFA.	Noted
	nd access logs		
3.10	Is access to the software controlled by password?	Yes, access to the Acting Office software is controlled by password authentication. Each user is required to create a secure password to log into the system, ensuring that only authorized individuals can gain entry.	Noted
		Password policies can be enforced to require strong passwords, including a mix of letters, numbers, and special characters, and periodic password	
		changes may be mandated to enhance security. This fundamental layer of protection helps safeguard the application and its data from unauthorised access.	
3.11	Does each user have a separate log on (user id)?	Yes	Noted
3.12	If there is no password facility please state how confidentiality and accessibility control is maintained within the software?	Yes, Acting Office supports advanced login methods such as Two-Factor Authentication (2FA) and Single Sign-On (SSO). With 2FA, users must provide a second form of verification—such as a code from an authenticator app or SMS—in addition to their password, adding an extra layer of security. SSO allows users to log in using their existing credentials from trusted identity providers like Google or Microsoft, streamlining access while maintaining strong authentication standards. Both options enhance security and improve the user experience by offering flexible and secure ways to access the software Acting Office indicates that they plan to include the option for authenticator app—based MFA in their upcoming updates to strengthen security and fully align with best practices.	Noted. OTPs to mobile/SMS as a MFA method, are not the most secure method of MFA as they are able to be compromised, and there have been a number of cyber incidents recently arising from the use of SMS based MFA. As such, MFA via authenticator app is strongly preferred. See conclusion point 2.03 Noted. SSO is only available for the website application, not the mobile application.
3.13	Are passwords masked for any user logging in?	Yes	2.04. Noted
	Is password complexity available and enforced?	Yes	Noted
	How many previous passwords are retained / the password history?	Typically, Acting Office retains a history of the last 5 previous passwords for each user. This password history prevents users from reusing their recent passwords when they change their password, thereby enhancing security by encouraging the creation of new, unique passwords. The exact number can be configured based on organizational policies, but maintaining a history of at least 3 to 5 passwords is a common best practice.	Noted
3.16	Are passwords encrypted?	Yes, the platform is hosted on Microsoft Azure, data in transit is protected using Transport Layer Security (TLS 1.2/1.3) with strong encryption algorithms such as AES-256 and RSA/ECDSA for certificate-based authentication. User credentials and passwords are never stored in plain text; instead, they are hashed with unique salts using PBKDF2 as implemented in ASP.NET Identity, ensuring compliance with security best practices.	Noted
3.17	Are users automatically logged off after a pre-set idle time? - Can the time period be changed? - Can any information be viewed without being logged in, including after logging off, if so what information?	Yes, users of Acting Office are automatically logged off after a pre-set period of inactivity to protect against unauthorized access due to idle sessions. This idle timeout period can typically be configured by administrators to suit the organization's security policies, allowing flexibility to shorten or extend the time as needed. Once logged off, no sensitive or user-specific information can be accessed without re-authentication. The system ensures that all protected areas are secured, and only publicly available or non-sensitive information—if any—is viewable without logging in. This helps maintain the confidentiality and integrity of user data at all times.	Noted
Deletion of t			
3.18	Is it possible to delete a transaction?	The user doesn't have the ability to delete a transaction. Transactions can only be deleted by raising a ticket. However, the transactions can be locked/hidden from all the users only by the admins and will then not be available in the audit trails.	Noted - more details in 3.20
3.19	If so, then how are deletions controlled by the system?	Deletions are only allowed if the customer requests for the same by raising a ticket.	Noted
3.20	Are deleted transactions retained in the audit trail (see below) and denoted as such?	No, once deleted by the admin, they are no longer available in the audit trails.	Noted
Audit trails 3.21	Does the system have an audit trail (log) which records all	Yes	Noted
3.21	changes to transactions in the system?		
	Does this log also record any system error messages and/or any security violations?	Yes	Noted
3.23	Is it possible to turn off or delete the audit trail?	No the user can't turn off the audit trail.	Noted

Ref	Requirement	Response	Reviewer Comments
3.24	Does the software allocate a system generated sequential	Yes	Noted
J.24	unique reference number to each transaction in the audit log,		
	date and time stamp it and record the user id?		
3.25	Are all master file changes recorded in the audit trail?	Yes	Noted
Compliance	rae an master me enanges recorded in the dudit trail!	100	
3.26	Does the system operate in a way that is compliant with data protection legislation including GDPR? How does the system facilitate this?	Yes, Acting Office is designed to operate in compliance with data protection legislation, including GDPR. The system facilitates this by implementing strong data privacy and security measures such as data encryption, strict access controls, and detailed audit logs to track data access and modifications. It supports user rights mandated by GDPR, including the ability to access, correct, or delete personal data upon request. Additionally, Acting Office enables data minimisation by collecting only necessary information and allows for configurable data retention policies to ensure personal data is not kept longer than required. Features like consent management and secure data transfer protocols further help meet regulatory requirements, ensuring that users' personal information is handled responsibly and transparently. The data centres are also located within the United Kingdom. Acting Office is compliant with ISO27001 and is	Noted
3.27		Cyber Essential plus certified as well. Acting Office may use sub-processors—third-party service providers that handle data on behalf of the application—to support various functions such as cloud hosting, email delivery, payment processing, or analytics. Each sub-processor is carefully selected based on their compliance with data protection regulations, including GDPR, and is bound by strict contractual agreements to ensure the security and confidentiality of the data they process. Acting Office maintains transparency by providing a list of its sub-processors and ensures that any data shared with them is handled securely and only used for the specified purposes. Regular audits and reviews are conducted to monitor sub-processor compliance and mitigate any potential risks related to data privacy	Noted
Backup and r	recovery		
	Is there a clear indication in the software or manuals as to how the data is backed-up and recovered?	Yes, Acting Office provides clear documentation—both within the software and in accompanying manuals—explaining how data backup and recovery processes are handled. This includes details on the frequency of backups, the methods used (such as automated daily backups to secure, offsite storage), and the procedures for restoring data in case of loss or system failure. The documentation also outlines roles and responsibilities for backup management, expected recovery time objectives (RTO), and steps users or administrators should follow to initiate a recovery. This transparency ensures users understand how their data is protected and how continuity is maintained in the event of an issue.	
3.29	How often are backups taken and to what point can restores be done?	Backups in Acting Office are typically taken on a daily basis, ensuring that data is regularly saved to minimise potential loss. Depending on the system's configuration and organisational policies, backups may also be performed more frequently—such as multiple times per day—for critical environments. Restores can generally be performed up to the most recent successful backup point, allowing recovery of data as close as possible to the time of any incident. Some setups may also support point-in-time restores within a backup window to recover data from a specific moment. The exact backup frequency and restore capabilities can be customised to meet the business's continuity and data retention requirements.	Noted
3.30		In the event of software failure, Acting Office facilitates recovery through a combination of automated backup restoration and transaction management features. The system maintains regular backups of the database and application state, allowing administrators to restore data to the most recent consistent backup point to minimise data loss. Additionally, Acting Office uses transactional integrity mechanisms—such as atomic transactions and write-ahead logging—that enable it to roll back incomplete or failed transactions automatically, ensuring the database remains in a consistent state. These features together help ensure that recovery is swift, reliable, and minimises disruption, preserving data integrity even after unexpected failures.	Noted
3.31	If software failure occurs part way through a batch or transaction, will the operator have to re-input the batch or only the transaction being input at the time of the failure?	If a software failure occurs partway through a batch or transaction in Acting Office, the operator typically only needs to re-input the transaction that was being processed at the time of the failure. The system uses transactional controls to ensure that fully completed transactions in the batch are securely saved, while any incomplete or partially processed transaction is rolled back automatically to maintain data integrity. This design minimizes data loss and reduces the need for operators to re-enter entire batches, improving efficiency and user experience during recovery from unexpected interruptions.	Noted

3.32 What features are available within the software to help track down processing problems? Acting Office includes several features to help track down processing problems? Acting Office includes several features to help track down processing problems efficiently. It maintains detailed audit logs that record user activities, system events, and transaction histories, enabling administrators to trace exactly when and how an issue occurred. The software also provides error logging and reporting, capturing error messages, stack traces, and contextual information to assist in diagnosing faults. Built-in monitoring	
dashboards offer real-time insights into system performance and highlight any anomalies or failures. Additionally, debugging tools and configurable alert notifications can be set up to promptly inform support teams of critical issues. These combined features make it easier to identify, analyse, and resolve processing problems quickly and effectively.	

Ref 4.	Requirement	Response	Reviewer Comments
	DATA PROCESSING AND REPORTING		- Commence
•	validation of transactions	V	Nistad
4.01	Is data input controlled by self-explanatory menu options? Are these menus user/role-specific?	Yes Yes	Noted Noted
4.03	Can the creation or amendment of standing data (e.g. customer account details) be undertaken using menu options or dialogue boxes as opposed to requiring system configuration?	Yes	Noted
4.04	Does the software provide input validation checks such as: - [account] code validation? - reasonableness limits? - validity checks?	Yes	Noted
4.05	What control features are within the software to ensure completeness and accuracy of data input?	Acting Office incorporates multiple control features to ensure the completeness and accuracy of data input. These include field validation rules that check data formats, required fields, and value ranges at the point of entry to prevent incorrect or missing information. The system uses real-time error messages and prompts to guide users in correcting input mistakes immediately. Additionally, business rules and workflow validations enforce logical consistency and approval processes, ensuring that data follows defined procedures before it is finalised. Duplicate detection mechanisms help avoid redundant entries, while audit trails record all changes for accountability. Together, these controls help maintain high data quality and reliability throughout the application.	Noted
4.06	How does the software ensure uniqueness of the input transactions? (i.e. to avoid duplicate transactions)	Acting Office ensures the uniqueness of input transactions through a combination of validation checks and system controls. It typically uses unique identifiers such as transaction IDs, reference numbers, or timestamps that must be distinct for each transaction. During data entry, the system performs duplicate detection by comparing key fields—like invoice numbers, dates, or customer details—against existing records to prevent repeated submissions. Additionally, business rules can enforce constraints that reject or flag transactions that appear to be duplicates. These measures work together to maintain data integrity by avoiding duplicate or redundant	Noted
4.07	Is data input by users validated by scripts or routines in the browser, or other client software, before transmission to the server?	transactions within the system.	Noted
4.08	Is data input by users validated by routines running on the server before data files are updated?	Yes, at the database/server layer, validation is enforced through data types, primary and foreign keys, unique constraints, check constraints, and stored procedures or triggers, ensuring that data integrity is maintained even if application-level checks are bypassed.	Noted
4.09	Does the above validation ensure that data entered in all input boxes: - Cannot be longer than a maximum length? - Cannot contain unaccepted characters such as semi-colons etc?	Yes.	Noted
4.10 4.11	Are input errors highlighted? If Yes are they: - Rejected and error report generated on-screen? - Rejected and error reports generated? - Accepted and posted to a temporary account/area?	Yes Yes, errors in forms or input fields are typically highlighted using a combination of visual cues and accessibility features. When a validation error occurs, the associated input field is marked with a distinct visual style—commonly a red border or underline—to indicate that the value is invalid.	Noted Noted
4.12	Are responses to erroneous data input clear so that they do not lead to inappropriate actions?	Yes	Noted
4.13	Does the software have an automatic facility to correct/reverse/delete transactions?	No, the software doesn't automatically correct, reverse or delete the transactions but it flags up those transactions using the system validations which prompts the users to make the necessary changes.	Noted
4.14	If yes, are these logged in the audit trail?	Not applicable	Noted
4.15	Are all data entries or file insertions and updates controlled to ensure that should part of a data entry fail the whole transaction fails?	Yes	Noted
4.16	Are messages provided to users clearly explaining whether the	Yes	Noted

	executed in the correct sequence (e.g. outstanding		
	transactions are processed before month end is run)?		
4.24	Does the software provide automatic recalculation, where	Yes, Recalculation refers to the automatic updating of derived values	Noted
	appropriate, of data input? (e.g. VAT)	or formulas when the underlying data changes, ensuring that	
		displayed results, totals, or dependent fields remain current without requiring manual updates. For example, in financial calculations, if an	
		invoice line item is modified (such as quantity or unit price), both the	
		line total and the overall invoice total are automatically	
		recalculated—e.g., Quantity = 2, Unit Price = £50 \rightarrow Line Total = £100;	
		after updating Quantity to 3, the Line Total automatically updates to	
		£150. Similarly, when the subtotal or a discount is changed, tax and	
		total payable are recalculated automatically—for instance, Subtotal =	
		£200, Tax $10\% \rightarrow$ Tax = £20, Total = £220; after updating Subtotal to	
		£250, Tax becomes £25 and Total updates to £275. Similarly, in the other modules as well, like Corporation tax, VAT returns, Self-	
		assessment tax returns and PAYE, as and when the data is updated,	
		the system automatically recalculates the liabilities.	
4.25	Is a month/period-end routine required to be undertaken?	Yes	Noted
4.26	Is it possible to delete accounts if the balance is Nil but	No	Noted
4.27	transactions have been recorded against the code?	Deference Number Formati Alabanimasia via ta 20 abanatan	Noted. Please note that

			See conclusion point
4.28	How does the software guard against/warn about duplicate	Acting Office guards against duplicate account numbers during setup	2.05. Noted
1.20	account numbers on set up?	by implementing real-time validation checks that compare new entries	
	· ·	against existing account numbers in the database. When a user	
		attempts to create or update an account, the system automatically	
		verifies whether the proposed account number already exists. If a	
		duplicate is detected, the software immediately warns the user with a	
		clear error message, preventing the account from being saved until a	
		unique number is provided. This proactive validation helps maintain data integrity and avoids conflicts or confusion caused by duplicate	
		account identifiers.	
4.29	How does the software enable the traceability [from, to and	From detailed audit logs	Noted
	through the accounting records] of any source document or		
<u></u>	interfaced transaction?		
			

Ref	Requirement	Response	Reviewer Comments
4.30	What drill down/around functionality is available within the software?	Yes, in the Acting Office, drill-down and drill-around functionality allow users to explore data in detail and from different perspectives. Drill-down enables navigation from high-level summary data to more granular information—for example, from total sales by region to sales by city, store, or individual transactions—helping users analyze the underlying details behind aggregate metrics. Drill-around allows users to view related data in different contexts without changing the primary report, such as exploring customer demographics, product performance, or inventory levels associated with a selected region or product. Together, these features provide interactive and efficient data exploration, supporting better insights and decision-making.	Noted
4.31	If the software uses a lot of standing information which changes frequently or regularly, does the software allow for such changes to be effected through the use of parameters or tables?	Yes, in Acting Office, frequently changing standing information, such as product lists, tax rates, pricing configurations, or workflow parameters, can be updated through configurable parameters and reference tables. Authorized users or administrators can modify these values directly in the system, and the changes are immediately reflected across the application without requiring code changes or system downtime. This approach ensures consistency, reduces the need for development intervention, and provides a controlled and auditable way to manage data that changes regularly.	Noted
Report writ	er		
4.32	Does the system have an in-built report generator or is a third-party solution used (if so please specify)?	The system currently allows users to customise there reports using the column selector option. However, if any specific report is requested for by the client, they raise a ticket and then the necessary development work is initiated. We are not using any third party for report generation purposes.	Noted
4.33	Is the report writer based on a standard SQL-type approach and is it flexible and easy to use?	N/A - there is no report writer	N/A
4.34	Can the report generator operate over the financial and operational aspects of the system, e.g. combining service metrics with financial information?	N/A - there is no report writer	N/A
4.35	Is a comprehensive data dictionary provided to aid field selection?	No	Noted
4.36	Does the system provide a library of reports and templates which can be amended, saved and re-run?	No	Noted
4.37	Can users create their own reports? If so, what are the controls on users doing this?	No	Noted
4.38	Can users create saved searches /filters / queries?	Yes	Noted
4.39	Can regular reports be added to user menus in the appropriate area of the system?	Yes	Noted
4.40	Does the system support the production of on demand (interactive) and scheduled batch reports?	On-Demand / Interactive Reports: Users can generate reports instantly based on current data, applying filters, sorting, or drill-down options as needed. This allows real-time insights and flexible analysis without waiting for predefined schedules. Scheduled / Batch Reports (In testing phase): Reports can be configured to run automatically at predefined intervals (daily, weekly, monthly) and delivered via email, dashboard, or file export. This ensures consistent reporting and reduces manual effort for recurring reports.	Noted

Ref	Requirement	Response	Reviewer Comments
5.	USABILITY		
5.01	Does the solution provide a multi-language user interface?	No	Noted. Please note that the tool at time of accreditation currently only supports the English language, and GBP currency.
5.02	Does the system allow for customizable branding and UI (e.g. corporate colour palate, upload company logo, etc)?	Yes, the system allows customisable branding and UI which includes corporate colour palate, company logo, URL's, Favicon etc. The branding customisation is completely done by Acting Office and if further changes are required, customer can reach out to Acting Office.	See conclusion point 2.05. Noted
5.03	Does the system have a similar look and feel and overall and consistency between screens and modules?	Yes	Noted
5.04	Is data entry easily repeated if similar to previous entry?	Yes, Acting Office supports efficient data entry for repeated or similar records. The system allows users to duplicate, copy, or prefill new entries based on previously entered data, reducing manual effort and minimizing errors. For example, when creating a new invoice, lead, or order similar to an existing one, users can use features like "Copy" or pre-populated templates (Canned emails) to carry over relevant fields, making the data entry process faster and more consistent. This functionality is particularly useful for recurring transactions, repetitive forms, or standard workflows.	Noted
5.05	Does the software prevent access to a record while it is being updated?	Yes	Noted
5.06	Is there locking at file or record level?	Yes	Noted
5.07	Does the software allow for the running of reports whilst records are being updated?	Yes	Noted
5.08	Can timestamps or user comments be added to transactions?	Yes	Noted
5.09	Is there the ability to store preferences and default values on a per-user basis. e.g. department/team/user?	Yes, Acting Office allows preferences and default values to be stored at multiple levels, including per user, team, and department. Users can configure their own defaults (e.g., preferred views, modules, or templates), while administrators can set organisation-wide or department-level defaults to ensure consistency. These settings are flexible and can be adjusted at any time to match evolving team structures and individual working styles.	Noted
5.10	Does the system have the ability to provide user-defined fields with associated validation of data input?	Yes	Noted
5.11	Can the system provide users with reminders and notifications e.g. workflows?	Yes	Noted
5.12	If the system provides workflows, does it have functionality to substitute/delegate authorisations?	Yes	Noted
5.13	Describe the tools and features available for a power user to make configuration changes such as amending a workflow.	Assuming that a power user refers to an admin user, then yes — admin users have full access to configure and amend workflows as required. They can make changes to existing workflows, set up new ones, and adjust rules and conditions to reflect operational requirements. Beyond workflow management, admin users also have a wide range of configuration options within the system, including user role management, permissions, templates, notifications, and other system settings.	Noted
5.14	Is there the ability for users to define and configure layouts of letters and forms?	Yes	Noted
5.15	Can users save the parameters of searches?	No	Noted
5.16 5.17	Does the system have a "universal search" option, allowing a search to be undertaken over all modules of the system? Can the system store menu option 'favourites' on a per user	Yes Yes	Noted Noted
5.18	basis? Can a user open multiple windows accessing the same or	Yes	Noted
5.19	different modules of the system? Can more than one software function be performed concurrently?	Yes	Noted
User docum	entation and training

5.28	How is the product supported: - Direct from the software house? - Via a Value Added Reseller (VAR) or Integrator?	Direct from the software house	Noted
5.29	Do VARs have to go through an accreditation process?	There is no VAR involved.	Noted
5.30	Is the software sold based upon number of named users or a	There is no limit on the number of users using the software. The	Noted
	number of concurrent users?	software is simply provided on a subscription basis to the	
		accounting firms.	
5.31	The supplier should detail the support cover options available, covering: - The hours provided? - Associated costs? - The global regions covered?	The support is provided by the Acting Office support team from 09:00am to 05:00pm on all working days. There are no additional costs for the support that is provided. Since the software is only for the clients based in the United Kingdom, the region that is covered is United Kingdom only.	Noted
5.32	Detail the process by which customers raise support requests and how these can be viewed/managed?	We have an in-built ticketing system using which the client can raise a ticket for any issues that they may face.	Noted
5.33	Please note the methods of support available: - Telephone? - Internet chat? - Remote access to customer workstation? - Other, please specify?	The support is available in the form of telephony, internet chat and remote access.	Noted
5.34	Do you offer service credits for failure to meet performance around SLA and uptime (if applicable)	Service credits are something that varies from client to client and is generally agreed before hand in the SaaS agreement itself.	Noted
5.35	What is your escalation path for tickets which have not been resolved within a reasonable time?	If the ticket hasn't been resolved within the designated time period, we raise it internally with the senior management in a form of a report	Noted
5.36	How often are general software enhancements provided?	Enhancements are continuous say, weekly updates, since they control the deployment and can push enhancements frequently without user intervention.	Noted
5.37	Will they be given free of charge?	Yes, all the enhancements are free of charge.	Noted
5.38	How are enhancements and bug fixes provided to customers?	Email notifications and system notifications are sent out to each and every client.	Noted
5.39	Is "hot line" support to assist with immediate problem solving available?	Yes	Noted
5.40	If so, is there an additional cost involved?	No additional costs are involved.	Noted
5.41	At what times will this support be available?	The support is available from 09:00am to 05:00pm on all the working days.	Noted
_	and www facilities		
5.42	Are the different modules of the system fully integrated (i.e. no set-up effort required in order to use the various modules together)?	res	Noted

Ref	Requirement	Response	Reviewer Comments
5.43	Are they integrated on real time basis or batch basis?	Internally, the system is already full integrated without having a need to separately integrate the modules. So, no separate integration is required, neither on real time basis nor on batch basis.	Noted
		In regards to third party integrations, Acting Office, integrations with other systems can operate on either a real-time or batch basis, depending on business requirements. Real-time integration ensures that data is exchanged immediately whenever a transaction occurs or a record is updated, keeping all connected systems current for leads, invoices and other critical information. Batch integration, on the other hand, processes and transmits data at scheduled intervals, such as hourly or daily, which is useful for large datasets or when immediate updates are not necessary. Acting Office allows administrators to configure integrations based on data type, volume, and required timeliness, providing a balance between real-time responsiveness and system	
		performance.	
5.44	Can the software be linked to other packages e.g. word processing, graphics, financial modelling, to provide alternative display and reporting facilities?	Yes	Noted
5.45 5.46	Can definable links to spreadsheets be created? Does the system provide a secure document storage capability: If so, please give examples of the document types saved and what transactions these might relate to.	Yes Yes, the system provides a secure document storage capability where it records documents like client Records, identification documents, compliance evidence, payroll records, VAT submissions, accounts and tax return submissions, anti-money laundering (AML) documentation etc.	Noted Noted
5.47	Can documents be scanned into a secure repository?	Yes	Noted
5.48	Does the system provide data migration tools for transactional and master data sets (e.g. employees customers, suppliers, journals, invoices).	Yes - please see more information in 5.49	Noted
5.49	What connection mechanisms does the software have and what breadth of functionality in terms of: - operations (add, update, delete)? and - what transactions/data it can access? E.g. if webservices APIs available, then can customers connect to whatever software they wish?	Acting Office supports multiple connection mechanisms to enable integration and data exchange with other systems, offering broad functionality across key operations and data access. The software typically provides web services APIs—such as RESTful or SOAP interfaces—that allow external applications to securely add, update, and delete records within the system. These APIs cover a wide range of transactions and data, including user accounts, ledger entries, stock items, invoices, and more, depending on the modules in use. By exposing these APIs, Acting Office enables customers and third-party software to connect seamlessly, facilitating automation, synchronisation, and reporting across different platforms. Access to specific operations and data through APIs is controlled by authentication and authorisation mechanisms to ensure security	Noted
		and compliance. This flexible connectivity allows customers to integrate Acting Office with their existing software ecosystems or build custom solutions tailored to their business needs.	
5.50	Does the system support mobile working?	Yes, however SSO is not required to log in to the mobile app. However the user can login in the web version on the phone to access full functionalities.	Noted. SSO is only available for the website application, not the mobile application.
			See conclusion point 2.04.

	companies is reliably identifiable and only accessed by	is reliably identifiable and securely segregated through a combination	
	authorised users for each customer/company?	of robust access controls and data partitioning techniques. Each	
		customer's data is logically separated within the system, often through	
		unique identifiers or tenant-specific databases, preventing any overlap or unauthorized visibility between organizations. Access to data is	
		strictly controlled based on user roles and permissions, ensuring that	
		users can only view or modify information related to their own	
		company or assigned accounts. Additionally, authentication	
		mechanisms and audit logs monitor and record all access attempts,	
		helping to detect and prevent unauthorized data exposure. This	
		layered approach guarantees that customer data remains isolated and	
		accessible only to authorized users within each respective organization.	

Ref	Requirement	Response	Reviewer Comments
6.09	What controls are in place to prevent users from one customer/company accessing data from another customer/company by accident or by design?	Acting Office implements multiple controls to prevent users from one customer or company from accessing data belonging to another, whether accidentally or intentionally. These include strict data segregation through separate databases or tenant isolation, ensuring that each customer's data resides independently. Access controls enforce role-based permissions tied to the user's specific company or group, restricting visibility and actions to authorized data only. Authentication processes verify user identities, while session management ensures users cannot switch contexts without proper authorization. Additionally, the system maintains detailed audit logs tracking all access and actions, enabling detection and investigation of any unauthorized attempts. Together, these controls provide a robust barrier that safeguards data privacy across all customers.	Noted
6.10	How is [Internet] communication traffic monitored to identify potential problems before they happen: - From a performance perspective? - From a security standpoint?	Internet communication traffic in Acting Office is actively monitored using advanced tools and practices to identify potential issues proactively. From a performance perspective, network monitoring solutions track metrics such as latency, bandwidth usage, packet loss, and response times to detect bottlenecks or degradation early. This enables quick intervention to maintain optimal system responsiveness and user experience. From a security standpoint, traffic is analysed in real-time using intrusion detection and prevention systems (IDPS) that look for unusual patterns, unauthorized access attempts, or malicious activity. Firewalls and security information and event management (SIEM) systems aggregate and correlate data to provide alerts on potential threats. Together, these monitoring approaches ensure both smooth operation and strong protection against cyber risks.	Noted
6.11	What procedures are in place to prevent a break in Internet Connection (at the server, client or in between) from causing data corruption?	To prevent data corruption caused by interruptions in the Internet connection—whether at the server, client, or somewhere in between—Acting Office employs several protective procedures. These include the use of transactional integrity mechanisms such as atomic commits and write-ahead logging, which ensure that only fully completed transactions are recorded and partially processed data is rolled back. The system also implements retry and timeout strategies to handle temporary network disruptions gracefully, avoiding incomplete data submissions. On the infrastructure side, redundant network paths and failover solutions help maintain connectivity and reduce downtime. Additionally, periodic data backups and consistency checks further protect against corruption, enabling reliable recovery if a failure does occur during communication.	Noted
6.12	Are communications between the user's computer and the software service encrypted: - User log in data only? - All data exchanged between user client and software service?	Communications between the user's computer and the Acting Office software service are fully encrypted, not just limited to user login data. The system uses industry-standard protocols like TLS (Transport Layer Security) to secure all data exchanged between the user's client and the software service. This comprehensive encryption protects sensitive information—such as login credentials, transaction details, and personal data—during transmission, safeguarding it from interception or tampering by unauthorized parties.	Noted
6.13	Is data on your servers encrypted at rest?	Yes	Noted
6.14	What level of encryption is used?	Acting Office uses strong encryption standards to secure data in transit, typically employing TLS 1.2 or higher with AES-256 encryption algorithms. This level of encryption ensures that all communications between the user's device and the software service are protected with robust, industry-recognized cryptographic methods, providing a high degree of confidentiality and integrity against eavesdropping or data tampering	Noted
6.15	Is a staging environment provided that is an exact replica of	Yes	Noted
6.16	production; which can be used for testing purposes? Is a test environment provided to test configuration changes? If so, is there an additional charge for this?	Having a separate test environment is essential for safely developing, testing, and validating changes without affecting your live data or operations. Acting Office's separate test environment allows you to simulate real-world scenarios, identify and fix issues, and verify new features or configurations before deploying them to the production system. Acting Office has a UAT platform of its own, and we also do provide separate UAT platform to the customers as well on request.	Noted

	associated segregation of duties .	environments. All changes undergo a structured process that includes	
		planning, development, testing, approval, and deployment. A clear	
		segregation of duties is maintained throughout this	
		lifecycle—developers are responsible for coding and unit testing, while	
		a separate QA team handles testing and validation in staging	
		environments. Final approval and deployment to production are	
		carried out by a release or DevOps team, independent from the	
		development team, to prevent any conflict of interest. All releases are	
		documented, version-controlled, and subject to change management	
		policies, with rollback plans and post-release reviews in place to	
		minimize risks and ensure accountability	
6.22	Is there sufficient segregation of duties preventing system	Yes, there is sufficient segregation of duties in place to prevent system	Noted
	developers from accessing and changing live applications and	developers from directly accessing or modifying live applications and	
	data files?	data files. Access to production environments is strictly restricted and	
		controlled through role-based permissions. Developers typically work	
		in development and testing environments, with no direct access to	
		production systems. All deployments to live environments are handled	
		by a separate DevOps or release management team, following a formal	
		change control process. This separation ensures that no single	
		individual has end-to-end control over the development, approval, and	
		deployment processes, thereby reducing the risk of unauthorised	
		changes and maintaining system integrity.	

Ref	Requirement	Response	Reviewer Comments
6.23	Explain the review and approval procedures covering system operations staff when emergency changes need to be made to live applications and data?	In the event that emergency changes are required to live applications or data, a controlled and auditable process is followed to ensure both speed and accountability. Emergency changes must be formally documented, including the reason for the change, potential impact, and risk assessment. These changes are subject to expedited approval by a designated authority—typically a senior system administrator or IT manager—not involved in the implementation itself, ensuring segregation of duties is maintained. Once approved, the change is implemented by authorized personnel and logged in the change management system	Noted
6.24	Is an audit trail always maintained of these emergency changes?	Yes	Noted
6.25	What procedures are in place when members of staff leave to ensure that their system access is stopped?	When a staff member leaves the organization, a structured offboarding process is followed to ensure that all system access is promptly and securely revoked. This includes immediate deactivation of user accounts, access tokens, and credentials across all systems, applications, and devices. The process is typically triggered by HR or management and executed by the IT or security team in coordination with identity and access management systems. Any company-issued equipment is retrieved, and email forwarding or account delegation is set up if necessary. A checklist-driven approach ensures that no access points are overlooked, and audit logs are reviewed to confirm that access has been successfully terminated. These measures help protect organizational data and systems from unauthorized access after an employee's departure.	Noted
	Mhich databases and sorvers are used to host the software?	Azura claud storage Monge Claud Azura blak storage	Noted
6.26	What forms of user authentication are supported e.g. user names, passwords certificates, tokens etc.?	Azure cloud storage, Mongo Cloud, Azure blob storage We support multiple forms of user authentication to ensure secure access to our systems and services. Standard authentication methods include unique user names and strong passwords, with configurable complexity and expiration policies. In addition, we offer multi-factor authentication (MFA) to enhance security, which may include time-based one-time passwords (TOTP), hardware or software tokens, and authentication apps. Depending on the integration requirements, we also support digital certificates, SAML-based single sign-on (SSO), OAuth2, and OpenID Connect protocols for federated identity management. These flexible authentication options enable organizations to align access controls with their internal security policies and compliance requirements.	Noted. OTPs to mobile/SMS as a MFA method, are not the most secure method of MFA as they are able to be compromised, and there have been a number of cyber incidents recently arising from the use of SMS based MFA. As such, MFA via authenticator app is strongly preferred. See conclusion point 2.03 Noted. SSO is only available for the website application, not the mobile application. See conclusion point 2.04.
6.28	What is the proposed product/service availability percentage?	The proposed product/service availability is targeted at 99.9% uptime, excluding scheduled maintenance windows. We implement robust infrastructure redundancy, real-time monitoring, and automated failover mechanisms to support this availability target. In case of any disruptions, incident response procedures are promptly executed to minimize impact and restore normal service as quickly as possible.	Noted
6.29	What percentage availability has been achieved over the past 12 months?	Over the past 12 months, we have consistently maintained an average service availability of 99.95%, excluding scheduled maintenance periods. This performance reflects our commitment to reliability, supported by proactive monitoring, resilient infrastructure, and a structured incident management process. Detailed uptime records and incident logs are maintained and can be shared upon request for verification or compliance purposes.	Noted
6.30	Is a service level agreement ("SLA") offered regarding: - Service availability?	Yes, we offer a comprehensive Service Level Agreement (SLA) that covers both service availability and data recovery.	Noted
6.31	- Data recovery? Is the service available 24x7 or are there downtime periods for maintenance?	The service is designed to be available 24x7 to support continuous user access. However, there are planned downtime periods for scheduled maintenance and updates, which are communicated to customers in advance to minimize disruption.	Noted

Ref	Requirement	Response	Reviewer Comments

Ref	Requirement	Response	Reviewer Comments
	ted Reporting	ncsponse	Reviewer Comments
6.86	Are reports produced from the same software as the financial applications or is separate reporting software used?	Reports are typically produced using the same software platform as the financial applications, ensuring seamless integration and real-time access to data. However, depending on customer needs, separate specialized reporting tools may also be supported or integrated to provide advanced analytics and custom report capabilities.	Noted
6.87	Does any application software (i.e. other than a web browser or PDF reader) need to be installed on the user's computer in order to prepare or view the reports?	No additional application software, other than a standard web browser and PDF reader, is required on the user's computer to prepare or view reports. All reporting functionalities are accessible directly through the web interface, ensuring ease of use and compatibility without the need for extra installations.	Noted
6.88	What browser versions are support: - On desktop/laptop (PC, Mac, Linux)? - On Tablets? - On mobiles?	All the browsers versions are supported.	Noted
6.89	Is access to the reporting facilities and data controlled by the same procedures as access to the main application?	Yes, access to the reporting facilities and data is controlled by the same security procedures as the main application. Role-based access controls, authentication mechanisms, and permission settings ensure that only authorized users can view or generate reports, maintaining consistent security and data privacy across all functionalities.	Noted
6.90	If it's different, explain the user access control facilities available to ensure information is only viewed by users with appropriate authority?	Some role-based permissions that restrict report viewing and generation to authorized users only. Access rights are managed through dedicated administration interfaces, allowing fine-grained control over which users or user groups can access specific reports or data sets.	Noted
6.91	In what electronic formats are reports produced: - PDF? - XML? - MS Excel spreadsheet? - CSV file? - As html for viewing in a web browser? - Other, please specify?	Reports can be produced in multiple electronic formats to meet diverse user needs, including PDF, XML, Microsoft Excel spreadsheets, CSV files, and HTML for viewing directly in a web browser. Additional formats may be supported depending on specific customer requirements or integrations.	Noted
6.92	Are report documents stored on the web server or on the user's computer? If stored on the web server, are they secure to ensure only users with appropriate authority can get access?	Report documents are typically stored securely on the web server rather than on the user's computer. Access to these stored reports is strictly controlled through authentication and role-based access permissions, ensuring that only users with appropriate authority can retrieve or view them. Security measures such as encryption and secure communication protocols further protect report data both at rest and in transit.	Noted
6.93	For documents viewable in a browser is any data stored on the user's computer in a web browser cache or temporary file? If Yes: - Is there any protection against other users viewing the report or data on which it is based? - Is it clear on the reports when they were produced and the date of the data on which they are based, so the user can tell whether they are viewing out of date information?	Yes, documents viewable in a browser may be temporarily stored in the browser's cache or temporary files to enhance performance. To protect this data from unauthorized viewing by other users on the	Noted
6.94	Are communications between the browser and the server encrypted for any report related communications?	Yes, all communications between the browser and the server for report related activities are encrypted using industry-standard protocols such as TLS (Transport Layer Security). This encryption ensures that data transmitted during report generation, viewing, or downloading is protected from interception or tampering, maintaining confidentiality and integrity.	Noted
6.95	If reports are produced dynamically each time the user views them can historical reports be reproduced at any time?	Reports can be dynamically generated based on the filters selected by users. This allows users to customize the data view and obtain reports tailored to specific criteria, providing flexible and relevant insights.	Noted
6.96	Can reports viewable in a browser be navigated dynamically by users? For example: - Enabling drill down to more detailed information? - Altering which columns and rows of data are displayed Choosing time periods? - Specifying selection criteria?	Users can drill down to more detailed information, customize which columns and rows are displayed, select specific time periods, and specify selection criteria to tailor reports according to their needs. These capabilities provide flexible and in-depth analysis directly within the reporting interface.	Noted
6.97	Can report data be reliably copied and pasted direct from browser viewable reports to an MS Excel spreadsheet retaining any table layout?	Yes, report data can be reliably copied and pasted directly from browser-viewable reports into Microsoft Excel while retaining the table layout. This functionality enables users to efficiently export data for further analysis or manipulation without losing the structure or formatting of the report.	Noted

Ref	Requirement	Response	Reviewer Comments
6.98	If reports are incomplete, for instance due to a poor Internet connection, is sufficient information provided to enable the user to notice that some of the report is missing?	Yes, if reports are incomplete due to issues such as poor Internet connection, the system provides clear indicators or error messages to alert users that some data may be missing. This ensures users are aware of the incomplete status and can take appropriate action, such as refreshing the report or checking their connection, to obtain the full information.	Noted

7.	Customer Relationship Management (CRM)		
System ov	erview		
7.01	What are the main steps a client needs to follow to set up and start using the software?	With its seamless and user-friendly cloud interface, users can access the application from any browser enabled device by simply logging in with the credentials i.e., login ID and password (users can be setup with invite only by the practice admins). Additionally, Acting Office supports secure login through Microsoft and Google accounts for enhanced convenience, restricting it only to organisation emails.	Noted
		In terms of configuration and implementation, please find other additional details:	
		1. No configuration needed – Acting Office is ready to use out-of-the-box. 2. Web-based access – only a browser and internet connection are required. 3. User account – login credentials provided by the admin (e.g., Mathew). 4. Role assignment – once logged in, the user is assigned a role (Admin, Manager, Staff, etc.)	
7.01 Cont.		Further, before officially using Acting Office in practice, the following items should be prepared: Branding & Identity Company logo (for system, invoice, and reports). Website & URL (for public-facing communication and AO login portal). Standardised email domain for official communications. Documentation & Templates Invoice template (with company details, tax ID, bank info, branding). Letterhead / report templates for client communication. Contract / agreement formats if needed. Configuration Inputs Practice address, contact details, and support email. Company registration details Payment gateway or bank account details for billing. Access & Setup User list (employees, admins, accountants, manager, staff).	Noted
		 Role assignments in the system. Policies & Compliance Data protection guidelines (privacy notice, consent forms). Internal workflow approvals (e.g., invoice approval process). 	
7.02	What is the high level process flow for the CRM module and what are the key user access roles?	The system is structured with three levels of user rights: 1. Admin, 2. Manager, and 3. Staff. Each role provides different levels of access and flexibility within the system, with the Admin role being the most comprehensive, allowing full control over all actions in the software.	Noted
		The team leader role falls within the Admin or Manager level access. The team leader role is simply a categorisation aimed at providing some specific set of reporting capabilities like viewing the team members, tasks, their calenders etc in order to ensure work management.	
7.03	What are the customisation options for client's own workflows and how are these delivered e.g.: - Using self-service options	Acting Office manages workflows through tasks section, which can help the user to seamlessly navigate through various processes.	Noted. More details for self Configuration Options see 7.58.
	- Using the vendor's development teams	Practice users can pre-define the workflow templates for its users, allowing customisations within the platform including the task steps, stages and monitoring for the reports. Customisations and developments can be done depending on the client requirements. Once the requirements are received, the feasibility is discussed and then implemented/developed and released on the live platform.	Users can define standard workflow templates within the application. For workflow configurations beyond the out-of-the-box options, the Acting Office can support customisation or development upon request via a support ticket. See conclusion point 2.07.
Lead creat	ion and management		
7.04	What is the process to capture leads in the solution? Is there any automated way to capture leads?	Acting Office provides an efficient solution for lead management. Leads are automatically created in the system whenever it detects incomming communications from unique phone numbers, emails, website inquiries, and chats. Additionally, users have the flexibility to create leads manually whenever required, integration with Google Ads is also available.	Noted
7.05	What information can be captured for a lead? Are there any mandatory fields?	The system allows users to save lead details such as first and last name, designation, lead source, phone number, email, and other key information. Business details can also be added at the time of lead creation, with integration to Companies House enabling automatic fetching of business information into the system. For Website queries submitted from the practice website, contact details such as name, phone and email are mandatory. While only the first name is mandatory while creating manual leads within the system, it provides flexibility to create a lead with minimal details and update additional information over time. A dedicated lead dashboard further supports efficient lead management.	Confirmed

7.06	How does a user track the status of leads?	Software has default lead statuses: Lead, Opportunity, Customer, Lead Lost, Not a Lead and Customer Lost. Users can keep a followup date to track the conversion as well as as well as followups.	Confirmed
		AO provides flexibility to practices to create multiple stages for better insights. After setting up stages in the practice profile, simply open a lead and assign it to the relevant stage. Leads can also be filtered based on these progression stages, allowing effective monitoring and management.	
7.07	Can a user merge multiple individual leads? (e.g. if they are from the same business or duplicated)	Users have flexibility to merge multiple leads into one and link multiple lead contacts to a common business.	Noted
		System automatically detects the phone number and email addresses if already saved in another contact and provide suggestions to directly merge into or link with existing business.	
7.08	Can leads be deleted/archived/reactivated?	Having a cloud based architecture we offer flexibility to manage status and maintian historical data for all the leads.	Noted
		The status of a lead can be updated, however, we do not offer options to delete any communication with a lead or contact from our database. This can be managed only via raising a ticket.	
		Status handling can be done for inactive contacts or a lead that could not be converted into a customer due to unforeseen circumstances can be marked as Lead Lost. Contacts received through calls, chats, or emails that are irrelevant, uninterested, or potential scams can be marked as Not a Lead. If required, you can also reactivate a lead at any time by updating its status to either Lead or Customer.	
7.09	How does a user search for a specific lead? What fields can be used for search?	Acting Office assigns unique lead reference numbers to a concerned lead. In addition to this there is also an Alias option available which can be prompted to provide with a short or a concised name for a lead. Search can be performed based on the following:	Noted
		 Lead reference Aliases Phone First name and/or last name Email address 	
7.10	Can a user set up notifications for follow ups on leads? If so, how is this set up?	Acting Office ensures that follow-up actions for leads are not missed by integrating follow-up date & time directly into the lead management workflow. When a follow-up date is set for a lead, the system automatically reflects this on the user's dashboard on the mentioned date. Leads are highlighted based on their upcoming follow-ups, prompting timely action.	Noted
		Further, an alert can be set using Internal Callback request for the same lead, which user can either do it for himself or for any other user (e.g. sales team members)	
7.11	How is history of correspondence with a lead or business tracked?	All interactions and updates made against a lead or linked business are captured in the system. Notes, changes in status, updates to contact details, and follow-up actions are recorded in the lead history tab. This provides a complete timeline of correspondence and activities, ensuring that users have full visibility into past	Confirmed
		communications and decisions whenever they revisit the lead or business profile.	
7.12	Can leads be assigned to a user?	Yes. Leads created in Acting Office can be assigned to specific users for better accountability and streamlined management. Assignment ensures that each lead has a responsible user tracking progress, handling correspondence, and following up as required. Once assigned, the lead will also appear on the respective user's dashboard, allowing them to manage their pipeline effectively.	Confirmed
Account (client) creation and management	Yes. Leads created in Acting Office can be assigned to specific users for better accountability and streamlined management. Assignment ensures that each lead has a responsible user tracking progress, handling correspondence, and following up as required. Once assigned, the lead will also appear on the respective user's dashboard, allowing them to manage their pipeline effectively.	
		Yes. Leads created in Acting Office can be assigned to specific users for better accountability and streamlined management. Assignment ensures that each lead has a responsible user tracking progress, handling correspondence, and following up as required. Once assigned, the lead will also appear on the respective user's dashboard,	Confirmed
Account (client) creation and management How is a new client added to the solution? What information	Yes. Leads created in Acting Office can be assigned to specific users for better accountability and streamlined management. Assignment ensures that each lead has a responsible user tracking progress, handling correspondence, and following up as required. Once assigned, the lead will also appear on the respective user's dashboard, allowing them to manage their pipeline effectively. The status of lead can be changed manually or automatically changes to Customer as soon as acceptance is received on LOE or first payment is made by the client. Businesses will be added to a contact (lead/customer) and will then appears in the businesses list of clients, assigned with a unique Client ID. The solution allows capture of comprehensive details, including: Basic details such as incorporation date trading start date, SIC code, Trading and registered office addresses, phone number,

Tax details including the following: Credentials for HMRC Agent authorisation 64/8 HMRC, Subscription details if the client subscribes to services, services availed	

7.15	Are there any external information feeds to populate publicly known information e.g. year end dates, addresses etc.	Yes. The system is integrated with Companies House. Each client profile includes a direct hyperlink to the official Companies House record. This ensures users can quickly access publicly available details such as incorporation data, year-end dates, and registered addresses. In addition, important Companies House deadlines are displayed prominently in the client's profile, helping practices manage compliance obligations	
7.46		effectively.	0.00
7.16	What contact information can be attached to a client?	The client profile stores full contact information including: - Email addresses, - phone numbers (with a direct-call option from the profile), - Postal addresses (registered and trading), - Default contact for correspondence. - These details can also be extended to linked client users, who may be provided with	Confirmed
		portal access through their email.	
7.17	How are leads attached to clients?	Leads are created as a contact, and further businsesses can be attached to those by changing their status or connecting an existing business using 'Link with business' option, ensuring contacts and associated information are connected appropriately within the client's record.	Confirmed
Quote cre	ation and management		
7.18	What is the process to create a quote?	A quote can be created: 1. from a lead's new business, 2. For an existing business, or 3. Directly through the Quotes section under Sales. With an end-to end flow while setting up new businesses, you can simulataneously utilise the Save & Quote option which allows a quote to be generated at the time of business creation. For existing businesses, quotes can be created using the quote icon in the client profile or the shortcut Shift + Q.	Noted
7.19	What information is captured in a quote? Can the information be prefilled?	A quote records 1. The creation date (default to today's date), 2. First response contact, 3. Selected services with descriptions and pricing, VAT rates, and optional discounts or notes. Service details and pricing are prefilled from the practice settings and are customisable before saving a quote. Additional services can also be added or removed.	Confirmed
7.20	How does a user send the quote to the client?	Quotes can be sent directly to clients using the Save & Email option during creation or through quick action buttons once the quote is saved.	Confirmed
7.21	Is there an approval process for quote creation or		Noted
	communication?	drawn, or uploaded. The system records the signatory's details along with the date and time of approval. There is an internal approval process for quotes and engagement letters as well and is something that can be activated and deactivated depending on client requirements.	
7.22	How does the client review and either accept or decline the quote?	Clients receive a secure email link to view the quote. Clients approve quotes by clicking Accept in the email link and this may be typed, drawn, or uploaded. Notifications are sent to the accountant when the client views or responds to the quote. The clients currently don't have the option to decline the quote within the system, instead they can let us know in the email and the accountant can decline it from there end. However, like mentioned at various instances, the option to decline the quote can also be provided, if required.	Noted. Clients can view and accept quotes via a system-generated link. Currently, there is no option to decline the quote within the page itself; any decline must be communicated via email or other external methods. However, the Acting Office offers high customisability and can accommodate this requirement through development if requested by the client. See conclusion point 2.07.
7.23	How does a user track the quote status? Is there any notification for quote status update?	Quotes move through four stages: <i>Drafted, Sent, Accepted,</i> or <i>Rejected</i> . Users receive notifications when a client views, accepts, or rejects a quote, allowing real-time tracking and follow-up.	Noted
Client On	boarding/KYC	<u> </u>	
7.24	How is client identity information captured in the solution?	Client identity information is obtained through data links, where clients can securely upload identity and address proofs. These documents are automatically integrated into the client profile. Additional details such as incorporation data, trading start date, SIC code, addresses, phone numbers, and email are captured directly in the client profile.	Confirmed
7.25	How is AML compliance information captured from the client in the solution?	AML compliance details are managed via the AML tab in the client profile. Officer details are automatically retrieved from Companies House records, and clients can upload identity documents through data links. Accountants can add members manually if needed, and all KYC submissions are stored within the AML section. Completion of the AML Compliance form records declarations, suspicions flagged, and confirmation of adherence to internal risk procedures.	Confirmed
7.26	Can a user customise the information request fields from the client?	Yes. While standard KYC and compliance documents are requested through data links, users can create custom data requests for specific information. These requests can be tailored to each client's requirements and saved in the client profile once approved.	Noted
7.27	Does the solution have tools to perform AML checks?	Yes. Acting Office includes built-in AML verification tools. Users can trigger identity checks for each officer or member, upload or import documents, and generate comprehensive AML reports. Reports provide ratings and risk levels (Low, Medium, High), and a risk dropdown allows users to update severity classifications. Suspicious activity can be flagged and documented as part of compliance.	Noted. See 7.59 for AML tool integration

7.28	How does a user set up client login for the client portal?	From the client profile, the 'Client User' quick action button enables portal access. Users can select a contact email from the dropdown list of saved business contacts. Once saved, the system sends an invitation link to the client, allowing them to create their login and access the portal.	Confirmed
7.29	What information can the client view from their end? And what action can be taken in the client portal?	Clients can: Upload identity and KYC documents and any other requested information through secure data links.	Noted
		Review and accept engagement letters via preset, drawn, or uploaded e-signatures. View and accept quotes, with e-signature capability. Respond to data requests initiated by the accountant.	
		Access their information in line with permissions set in privacy controls.	
7.30	Does the tool have the functionality to create engagement letters?	Yes. Acting Office allows users to create and manage Letters of Engagement (LOEs) directly within the platform.	Confirmed. See 7.31,7.32 for more LOE details.
7.31	Can engagement letters be customised per client or service line, and are there templates for different engagement types (e.g. annual, one-off)?	Yes. Engagement letters are drafted based on the services selected from the practice profile. Each service has pre-defined templates (e.g. CIS, VAT, PAYE, SA100) that autopopulate relevant fields. Users can further edit content for a particular client or service line, enabling both standardised and tailored engagement letters.	Noted
7.32	Does the tool pre-populate key client information into the engagement letter?	Yes. Client information such as business name, contract period, contact details, account manager, and selected services is automatically pre-populated into the LOE. Service-specific data (e.g. number of subcontractors for CIS, payroll frequency for PAYE) is also pulled in from client records.	Noted
7.33	Is there a built-in approval workflow (e.g. maker-checker) before an engagement letter can be sent to a client?	The standard workflow includes draft, send, and accept stages. Engagement letters can be reviewed and edited by the assigned users before sending which can be routed via a well built review mchanism procedure.	Noted
7.34	How are engagement letters shared with clients?	Engagement letters are shared via email directly from the platform. Clients receive a secure link to review the document online and can accept it electronically using multiple signature options. Once accepted, the engagement letter is saved in the system, and the associated services are automatically activated in the client profile.	Confirmed
Invoice &	receipt		
7.35	Does the tool have the functionality to generate invoices?	Yes, user can raise invoices in the software. Raising credit notes, creating receipts, managing refunds can be effeciently done in the billing area of our software. Additionally, user can also view and download the invoices from the software itself.	Noted
7.36	How does a user create an invoice?	A user can create an invoice in the system by selecting the currency icon within the software. Additionally, the system also supports automated invoice generation. For example, when a quote is accepted or when a task triggers an action that requires invoicing, the software intelligently generates the invoice automatically, ensuring accuracy and efficiency.	Noted
7.37	What information can be amended when preparing an invoice? Does the tool pre-populate key client and quote information?	The software pre-populates key information when preparing an invoice. Client details, dates, due dates, and quote information (in cases where the invoice is raised from an accepted quote) are automatically filled in for convenience. However, users retain full flexibility to amend these details as needed. In addition, invoices can be edited after creation, and there is also a transfer functionality that allows an invoice to be reassigned to another client if required.	Noted
7.38	For time based services, can time be tracked in the tool to input into invoices?	Our system does not support raising invoices directly based on allocated time. Instead, the quantity for each line item must be specified when creating an invoice. However, we provide a manual timesheet option that allows users to input the number of hours worked for a specific module along with the applicable hourly rate. Based on this information, the system automatically generates an invoice, ensuring flexibility in billing for time-based services.	Noted - timesheet details as per tab "11. Other"
7.39	How is an invoice sent to the client? Can the invoice be sent to the client with set schedule / on a regular basis automatically?	Users have multiple options for sharing invoices with clients. Invoices can be sent directly via email from the system or downloaded for physical dispatch, offering flexibility in communication. Additionally, the system supports recurring invoicing, by setting a desired frequency, invoices are automatically generated at the scheduled intervals, streamlining regular billing processes.	Confirmed
7.40	How does the client review the invoice?	Clients receive the invoice via email, where all key details such as descriptions, amounts, discounts, and VAT are clearly presented. After reviewing the information, they can proceed with payment by clicking the integrated "Pay" button, which redirects them to the secure payment gateway.	Confirmed
7.41	How does the solution manage invoice payment? What are the payment options? (e.g. direct debit, bank transfer etc)	The solution supports multiple payment options through a combination of integrations and manual entry. For online payments, we integrate with Stripe, enabling seamless management of receipts, and with GoCardless, which facilitates a reliable and efficient direct debit mechanism. For clients preferring bank transfers, payments can be recorded in the system through manual entry, ensuring all transactions are properly tracked. This flexibility allows users to manage invoice payments conveniently and in line with their clients' preferences.	Confirmed
7.42	How is the invoice status tracked? Can the solution send notification when the invoice status changes or when an invoice is due?	Managing invoice statuses in Acting Office is both effective and efficient. The system automatically assigns and updates statuses such as Active, In-Progress, Paid, Due, and Deleted without requiring manual intervention. Invoices are seamlessly filtered based on these statuses, providing clear visibility and organisation. Additionally, the system can automatically send reminders to clients when an invoice becomes overdue, ensuring timely follow-ups and improved payment collection.	Noted

7.43	How does the solution manage payment receipts? And how are the receipts sent to the clients?	Acting Office automates receipt management through integrations with Stripe (for card payments) and GoCardless (for direct debits). Payments made through these channels are automatically recorded in the system. For bank transfers, users can manually record full or partial receipts directly from the invoice menu. The solution also supports advance receipts, which can later be allocated against invoices. Clients receive instant confirmation of payments, with a downloadable receipt available from their portal once the transaction is completed. Each receipt is assigned a unique reference number for tracking, and users can also download or email client statements summarising receipts and outstanding balances.	Confirmed
7.44	How does a user manage credit or refund in the solution?	Credit notes for unpaid invoices can be created through the three-dot menu on the invoice. Users specify the date, amount, and reason, and may add remarks for further context. Refunds can be initiated directly from the credit note by selecting the 'Initiate Refund' option. The system allows adjustment of the credit note against outstanding invoices or processing refunds against past receipts. Each refund is logged with a unique reference number, and all refunds are displayed under the Refunds tab, with filters and options for tracking.	Noted
7.45	Which user types in the solution have access to invoice function?	The invoice function is available to all the users. These roles can create, edit, send, transfer, and manage invoices. However, credit notes, receipts, and refunds can also be raised and managed by admin and manger roles only for enhanced security. Access rights can be configured in the practice profile to ensure appropriate segregation of duties.	Noted
7.46	Can the system restrict invoicing or service delivery if an engagement letter has not been signed by the client?	Yes. Acting Office only allows the creation of invoices once a letter of engagement is signed and the quote has been accepted.	Noted
7.47	What are the communication options available in the solution for the user to contact leads or clients?	Leads can be effectively communicated with through emails or calls. All communication details are securely stored in the system, allowing you to conveniently send follow-up emails or place direct calls to the concerned lead.	Confirmed
7.48	How does a user record notes or complaints from leads or clients?	Users can record notes or complaints directly in the system by raising concerns through the complaints section. This allows management to track, monitor, and resolve issues efficiently while maintaining a clear record of client interactions.	Noted
7.49	How does a user request documents from a client?	Users can request documents from clients through the data request feature in Acting Office. They can initiate requests for details, bank statements, or employee information, ensuring a seamless and efficient exchange of information.	Confirmed
7.50	What templates are available for client communication? (e.g. Letters, information requests, quotes, services etc) Can a user modify the templates?	Templates in Acting Office can be added and fully customised to meet user requirements. Using the tags functionality, users can insert dynamic placeholders within the content, which automatically update with client-specific information stored in the system, ensuring personalised and efficient communication.	Noted. Available templates as per each functionality section answers, available for LoE, quotes and information requests etc.
7.51	What security features are used for document or information sharing (e.g. OTP, authentication code, e-signatures)?	Documents can be shared with clients in a highly secure and controlled manner through our one-time password (OTP) mechanism. When a document is shared, the client automatically receives a unique OTP delivered to their registered email address. To access the document, the client must enter this OTP in the designated verification field, ensuring that only the intended recipient can view the content. This additional layer of security not only safeguards sensitive information but also reinforces trust and confidentiality in all client communications.	Noted. OTPs to mobile/SMS as a MFA method, are not the most secure method of MFA as they are able to be compromised, and there have been a number of cyber incidents recently arising from the use of SMS based MFA. As such, MFA via authenticator app is strongly preferred.
Reporting	/ Analytics		See conclusion point 2.03
7.52	Are there dashboards available in the solution, and if so, which ones are provided? (e.g. client, quotes, revenue, pipeline etc)?	Acting Office features an intuitive dashboard for easy access to key information. A dedicated dashboard is also available for Admin users, providing deeper insights into financial performance and lead management. In addition, specialised dashboards are available to track timelines, revenue, and collections for more effective management.	Noted
7.53	Can users customise existing dashboards and/or create new ones?	Currently, dashboards in Acting Office are pre-designed to provide key insights and cannot be customised or newly created by users. However, they are structured to cover the most relevant aspects of practice, financial, and lead management to ensure comprehensive visibility. You do have required status and date filters with you to cutomise the dashboard as per your requirement.	Noted
7.54	What actions can a user take from within the dashboards (e.g., modify records or information)	The intuitive dashboard enables users to efficiently manage their activities in one place. From adding tasks and managing leads to addressing urgent actions and tracking follow-ups, all key functions can be performed directly within the dashboard.	Confirmed
7.55	ion / Administration Are there differences between the mobile app and website functionality for the CRM module?	Mobile app is still under development and currently it only supports Calls and Chats functionality. However, you can use the Acting Office platform from the mobile using the internet browser.	Noted. Currently the mobile app's CRM feature is limited to calls and chats. There is activity on the roadmap to expand this functionality.
7.56	How does a user set up notifications or alerts in the solution?	Acting Office ensures that all important communications are delivered to the respective users through automated email alerts. Practices can benefit from these carefully designed notifications and also customise which alerts should be shared, based on their needs and preferences. The client provides us with a list of notifications and reminders that they need and then the IT team sets those up in the background based on the requirements.	See conclusion point 2.06. Noted. Standardised notifications are available for configuration by the administrator within the application. For any notification requirements beyond the standard configuration, clients may raise a support ticket, and the Acting Office will assist with the custom setup.
			See conclusion point 2.07.

7.57	How are documents managed in the solution? Are there any controls around who can access these documents?	The Document section in Acting Office is designed as a centralised storage hub for all important files, ensuring quick and convenient access. Any information or documents shared by customers are automatically saved here, and users also have the flexibility to create or upload documents manually as needed.	See 11.14 for access control.
7.58	What customisation is allowed in the CRM module?	The CRM module provides extensive customisation options to meet your practice needs. You can define custom lead stages, create tailored fields to capture specific client information, configure user roles and permissions, and personalise dashboards for improved visibility. Integrations with third-party applications can also be enabled to streamline processes and enhance functionality. Additionally, a customisable icon allows you to adjust report columns as per your specific requirements.	Noted
7.59	Does the solution integrate to any third party tools? If so, please provide integration examples (e.g. communication, payment, AML etc.).	The system also integrates with third-party applications to enhance functionality. Key integrations include Veriphy for AML checks, Twilio for communications, and Stripe and GoCardless for payment processing.	Noted

8.01	What is the high level process flow for the payroll module and what are the key user access roles?	The payroll process in Acting Office follows a structured flow: employee setup \rightarrow pay run scheduling \rightarrow payroll processing \rightarrow FPS/EPS submission to HMRC \rightarrow payslip and report generation. The roles are the same within the entire Acting Office system categorised into Admin, Manager and Staff user roles. Each level user role can be customised on request, for example, manager can submit the PAYE but not a staff user.	Noted.
		The team leader role falls within the Admin or Manager level access. The team leader role is simply a categorisation aimed at providing some specific set of reporting capabilities like viewing the team members, tasks, their calenders etc in order	
		to ensure work management.	
Payroll Se	tup and Admin		
8.02	How does a user set up payroll function for a client? What is	The control for this of the collision and the co	Noted
	covered in the payroll settings?	The payroll function for a client can be setup by adding important information such as the tax year, PAYE reference, HMRC office number, and other important details in the setting up wizard. All the information saved during the setup proces can be later on edited from the settings tab. Additionally, settings tab also provide accessibility to save details to run auto payrolls, configure notifications, connect pension software providers such as Nest and SmartPension and add employee logins for a concerned client.	
8.03	What are the key data fields needed to configure a payroll run?	Essential fields include employee personal details, tax code, NI details, gross or net pay, payment frequency, director status, pension scheme, student loan or postgraduate loan status, and deductions or additions.	Confirmed
8.04	How does a user add payroll information into the solution (e.g. manual, upload file, integration)?	Information can be added manually, via bulk import templates, or through secure client data requests in which the client can directly provide a list of information for their employees using a secure link which can be accessed by the respective accountants. Integration with Companies House and secure links further streamline updates.	Confirmed
8.05	How is payroll date and frequency managed in the solution? Can the payroll frequency be set up differently for different employees?	Payroll frequencies such as weekly, monthly, or annually can be set per client or adjusted per employee using the <i>Change Pay Frequency</i> utility, providing flexibility.	Confirmed
8.06	· ·	Yes, the employees can be categorised into different departments. The departments can be created and then employees can be categorised in different departments accordingly.	Noted
Pay Calcu	lation and Deductions		
8.07		Bonuses, commission, and variable pay are recorded under Additions and Deductions,	Confirmed
0.00	how is variable pay added to a regular payroll)?	ensuring accurate inclusion in gross pay and compliance with HMRC reporting.	Confirmed
8.08	How are changes in salaries / benefits communicated to HMRC and subsequent tax codes changes received?	Updates to salaries or benefits are processed in the system, reflected in FPS submissions, and HMRC notifications (such as new tax codes) are automatically retrieved in the notification tab.	Confirmed
8.09	How is retroactive pay / backdated pay adjustment applied to the current payroll in the system?	The system allows you to process the payroll for the previous periods without a late submission reason dropdown. Further, if the current period payroll has already been processed, then in order to process a backdated payroll, you can undo the payroll and then do the previous submission and then an amended submission for the period already submitted. By doing the above, the HMRC gets the updated YTD figures.	Noted
	weekend premium, overtime etc.)?	Shift allowances, overtime, and premiums (e.g., night or weekend rates) are managed as additions under the employee's payroll profile and included in pay calculations.	
8.11	How is leave or absence recorded in the payroll for pay adjustment calculation?	Leave and absence are recorded in the employee profile under leave management, with start and end dates. Relevant statutory leave types are supported such as maternity, paternity, adoption, shared parental, annual leave.	Noted
8.12	How is holiday pay managed in the solution?	Holiday pay is calculated based on pay frequency and employee details, with entitlement tracked in the leave section. Carry-over rules can be configured in settings section.	Noted
8.13	How is the final termination pay calculated in the solution (e.g.	The final termination pay needs to be calculated manually and then the figures need to be	Noted
8.14	unused leave, last working day and other settlements)? What is the approval flow for payroll generation and payment? How is this shared with the client?	accordingly inputted into the system. Payroll runs can be shared with clients via email confirmations prior to FPS submission. Clients may review through secure links, after which the payroll is finalised and submitted.	Confirmed
8.15	Does the solution manage expense payments for employees? If so, how are expenses managed in the solution?	Yes. Expenses are entered and managed under <i>Expenses and Benefits</i> . They are reported to HMRC where applicable and included in payroll calculations.	Confirmed
8.16	How are pension contributions captured and calculated in the payroll?	Pension schemes are created in Acting Office with contribution type, tax relief, and earnings basis configured. Employees are assigned schemes and contributions are auto-calculated in each pay run.	Confirmed
8.17	How are salary sacrifice schemes managed in the solution?	Salary sacrifice is supported through deductions in payroll and pension scheme configurations, ensuring correct tax and NI treatment.	Confirmed
8.18	How are additional taxable benefits managed?	Taxable benefits are recorded under Expenses and Benefits and are included in P11D submissions for HMRC compliance.	Noted
8.19	How are student and postgraduate loans managed in the solution?	calculated in payroll and reported via FPS.	Confirmed
8.20	How is director payroll and NI managed in the solution? (for alternative calculations or net-to-gross calculation)	Directors can be flagged in employee setup. Acting Office supports annual or alternative NI calculation methods, with correct application in pay runs.	Confirmed
8.21	Is there an option to set up charity donation from the payroll payment? If so, how is payroll giving managed?	No, no option as of now.	Noted
Payment 8 22	How are not calary payments managed in the colution? Con	Net havis calculated within havings and havener runs can be managed in Astica Office	Confirmed
8.22	How are net salary payments managed in the solution? Can payment runs be managed from the solution?	Net pay is calculated within pay runs, and payment runs can be managed in Acting Office, including scheduling and exporting payment instructions.	Confirmed
8.23	Is the solution integrated to any pension providers? How are both employee and employer contributions to pension providers managed?	Yes. Pension contributions for both employee and employer are recorded in pay runs and can be exported or integrated with pension providers. We have our integrations with renowned pension providers such as Nest and SmartPension, which facilitates seamless transfer of information with respect to pension.	Confirmed.
8.24	How are tax and NI payments to HMRC tracked and managed? Can payment runs be managed from the solution?	Tax and NI liabilities are calculated in each run, reported via FPS/EPS, and tracked through HMRC payslip reports. Payment runs can be generated for HMRC remittance in our software.	Confirmed

System ov			
9.01	What is the high level process flow for the bookkeeping module and what are the key user access roles?	The bookkeeping module follows a structured process: setup of client business → recording sales, purchases, expenses, dividends, assets, and journals → managing bank transactions and reconciliations → VAT return preparation and submission → reporting and analysis. There are no user roles assigned to this module. However, in addition to this client can also perform their bookkeeping on their own using designated credentials. Each level user role can be customised on request, for example, manager can submit the VAT return but not a staff user.	Noted. By default, no user roles are assigned to the bookkeeping module. However, if role-based access control (RBAC) is required, clients can raise a support ticket, and the Acting Office will assist with the necessary customisation.
Accounts 6	Payable / Purchases		See conclusion point 2.07.
9.02	How is supplier information managed in the solution? What information is captured?	The bookkeeping module in Acting Office provides a dedicated suppliers section where users can add and manage supplier records. New suppliers can also be created directly at the time of raising an invoice. Integration with Companies House enables automatic syncing of available business information, which can be further edited as required. The system captures comprehensive supplier details, including name, contact information, VAT and EORI numbers, bank details, payment terms, and notes.	Noted
	How does a user create a purchase order in the solution?	prices, and VAT rates. Once saved, the PO can be converted into an invoice seamlessly in Acting Office.	Noted
9.04	Does the solution record the list of items/ service from suppliers for purchasing?	Yes. Items (products/services) are stored with codes, descriptions, VAT rates, purchase/sales prices, and can be reused across invoices and orders.	Noted
	Does the solution support the generation of a goods receipt note?	Yes. Goods receipt details can be recorded and linked to purchase orders and invoices.	Noted
9.06	How are supplier invoices received and logged in the tool?	Invoices can be created manually, imported via CSV, or generated from scanned/uploaded documents (OCR). Supplier details and references are automatically populated.	Noted
9.07	How are supplier payments approved?	Payments are initiated through the Add Payment function, with workflows allowing review and approval before final posting.	Noted
9.08	Does the system perform any validation controls (e.g. three	Yes. The system supports three-way matching (PO, goods receipt, invoice) and flags	Confirmed
	way match) before approving payment? How does a user record the payments to suppliers in the	mismatches for review. Payments are recorded manually or imported, with auto-allocation across outstanding	Confirmed
9.10	solution? Does the solution manage supplier credit notes and/or refunds? If so, what information is captured?	invoices using FIFO. Excess payments are stored as supplier advances. Yes. Credit notes can be created against invoices with details of items, quantities, VAT, and refunds. They can be applied to outstanding invoices or recorded as supplier refunds.	Noted
Accounts I	Receivable / Sales		
	information is captured?	The bookkeeping module in Acting Office provides a dedicated customers section where users can add and manage customer records. New customers can also be created directly at the time of raising an invoice. Integration with Companies House enables automatic syncing of available business information, which can be further edited as required. Captured information includes contact details, VAT/EORI numbers, payment terms, credit limits, discounts, and notes.	Confirmed
9.12	How are purchase orders received from customers captured in the solution?	Customer PO cannot be created within the system but those received from customers can be attached against sales invoices, ensuring traceability.	Noted
9.13	How are customer goods receipt notes captured in the solution?	Customer good receipt notes can be recorded and linked to invoices for reconciliation.	Confirmed
9.14	How are sales invoices managed in the solution?	Sales invoices can be created manually, auto-populated from estimates, or imported. The system supports VAT handling, discounts, attachments, and emailing directly to customers.	Noted
9.15	How are received customer payments tagged to the relevant invoice?	Receipts are recorded manually, via import, or through bank feeds. Auto-allocation links payments to outstanding invoices on a FIFO basis, with manual allocation also available.	Noted
9.16 Expenses	Does the solution manage customer credit notes and/or refunds? If so, what information is captured?	Yes. Credit notes can be created against invoices with full details, and refunds can be processed to customers where applicable.	Noted
	Does the tool have expense management functionality?	Yes. Acting Office supports expense claims, reimbursements, and refunds for efficient and effective expense management.	Noted
	If so, how are expense claims recorded in the solution? Will this be recorded automatically if the client is using both payroll and bookkeeping module?	Claims are created manually by adding users and line items. If both payroll and bookkeeping modules are used, approved expenses can flow into payroll for automatic processing.	Noted - see tab "8. Payroll" for more details for expense management
9.19	How are expense types, cost centres, receipts recorded	Each claim records account codes, VAT, cost centres, amounts, and receipts/attachments.	Noted
9.20	against expense claims in the solution? Are there approval processes for the expense claims in the	Yes. Expense claims can be reviewed, approved, or rejected with audit trails maintained.	Noted
9.21	solution? If so, how are they managed? How are reimbursement payments recorded in the solution?	Reimbursements are entered with allocation against expense claims, and payments	Noted
9.22	How is expense owner information managed in the solution? Can the user allocate cost centres and claim limits to the	posted to the relevant bank accounts. Expense owners are linked to claims, with options to assign cost centres and set claim limits.	Noted
Dividends	expense owners?		
9.23	How does a user add shareholders in the solution? What information is recorded for a shareholder in the solution? Can the solution import the shareholder information from Companies House?	Shareholders can be imported from Companies House or added manually with details including name, contact information, share type, and number of shares.	Noted
9.24	How are dividends managed in the solution? What		Noted
9.25	** *	total amounts. The system records share classes, number of shares, and dividend amounts, with	Noted
9.26	in the solution? Does the solution restrict user to post dividends if there is a loss?	automatic journal posting. Yes. The system validates available profits before permitting dividend distribution. If an attempt is made to declare dividends in the event of a loss, a warning message is	Noted
Assets		triggered to alert the user.	
9.27	How are fixed assets recorded in the solution?	Assets are added with purchase details, supplier/bank, VAT, depreciation method, rate,	Noted
9.28	How does the solution support various asset depreciation methods?	and useful life. Supports straight-line and written-down value methods, with automated depreciation journals and rollback functionality.	Noted
			•

9.29	How does the solution support the disposals of assets?	Disposals record proceeds, calculate profit/loss, and generate corresponding journals. Disposed assets can be reactivated if needed.	Noted
Journals			
9.30	How does a user create a journal in the solution?	Journals can be entered manually with accounts, VAT, debit/credit, and descriptions. In addition to this, system also records automatic journals, from the relevant section or entry.	Confirmed
9.31	Can journals be imported; what input methods are supported (manual, OCR, CSV, bank feeds)?	Currently, journals cannot be imported. However, users can create journals manually, and the system also generates automatic journals for processes such as bank imports, dividend declarations and while while charging depriciation.	Noted
9.32	Are there validations for duplicate or miscategorised entries?	Yes. The system checks for duplicates and validates entries against the chart of accounts.	Confirmed
Banking			
9.33	Does the solution interface directly to third party banks?	Yes. Bank feeds enable direct import of transactions, alongside CSV uploads and manual entry.	Confirmed
9.34	How are transactions imported?	Transactions can be imported from bank feeds, CSV templates, or added manually.	Confirmed
9.35	How are transactions categorised (e.g. Al suggestions, rules)?	Categorisation uses AI suggestions, bank rules, and user-defined rules. Cash coding allows bulk categorisation.	Confirmed
9.36	How does the tool support reconciliation between the accounts and cash in bank?	Reconciliation matches imported transactions with invoices, receipts, and payments, with visual status indicators for explained/unexplained items.	Confirmed
9.37	Is there automatic linking between transactions and customer and supplier invoices?	Yes. Transactions are automatically matched to customer or supplier invoices where references align.	Noted
9.38	Are there validations for duplicate or miscategorised entries?	Yes. Duplicate imports and miscategorised entries are flagged for review.	Confirmed
VAT			
9.39	Does the solution integrate with HMRC's Making Tax Digital (MTD) system?	Yes. Acting Office is fully integrated with HMRC's Making Tax Digital for VAT submissions.	Confirmed
9.40	How does a user enter VAT records? Can the user import records from files or through integration? What information is needed for a user to create VAT records for the first time?	VAT details such as the VAT number, registration date, scheme, frequency are captured at setup. Records can be imported, manually entered, or integrated from transactions.	Noted
9.41	Does the solution auto calculate VAT liabilities and handle multiple VAR rates? If so, how is the auto-calculation managed?	Yes. VAT is calculated automatically across invoices and transactions, supporting multiple VAT rates, that can be setup either in the setup wizard or from the setting section.	Noted. See 10.02 for Setup Wizard details
9.42		Return frequencies are configurable monthly, quarterly, annual. Late claims can be rolled into subsequent returns.	Confirmed
9.43	Does the solution support multiple VAT schemes (e.g.	Yes, Acting Office supports the following schemes:	Noted
5.45	Standard VAT, Flat Rate Scheme, Cash Accounting Scheme,	1. Standard, 2. Flat Rate,	Noted
	on which VAT schemes this solution supports.	3. Cash Accounting	
9.44	Does the solution flag issues like duplicate entries, missing invoices, or incorrect tax codes in VAT return? If so, please provide details on what issues the solution can flag for VAT return.	Yes. Any duplicates, missing invoices, and incorrect tax codes before return submission are flagged in Acting Office for user convenience.	Confirmed
9.45	How does a user submit the VAT return to HMRC from the solution?	VAT returns are filed directly via MTD integration, with acknowledgment receipts stored.	Confirmed
9.46	How does the solution manage the internal review and approval, external client review and approval processes for VAT return?	Returns undergo preparer review, reviewer approval, and client approval before submission.	Confirmed
Reporting			
9.47	What dashboards are available in the solution?	Dashboards provide overviews of cashflow, P&L, balance sheet, invoices, purchases, expenses, and tax timelines.	Confirmed
9.48	Can a user customise the reports?	Yes. Users can customise layouts, filters, decimal displays, and add commentary. All these can be configured in the settings sections of the Bookkeeping module.	Confirmed
9.49	What actions can a user take from the dashboards? (e.g. modify the records/ information)	Dashboards allow drill-down to underlying records, creation of entries (invoices, receipts), and quick report generation.	Confirmed
9.50	How does a user generate financial statements? (Balance sheet, P&L, Cash flow)	Balance Sheet, P&L, and Cashflow reports are auto-generated from trial balances and journals.	Confirmed
9.51	How is budget vs actual reported?	Budget Manager in Acting office enables creation, import, and comparison of budgets with actuals, supported by variance reports.	Noted
Configura	tion / Integration	A SERVICE OF STREET	
9.52	How does a user set up business details for a client? What information is captured for a book?	Business setup includes SIC codes which is auto-fetched from Companies House, category (product/service), start date, and mode of import for historic records, Vat details and	Noted
9.53	How are VAT details set up in the solution?	bank records. VAT registration details, schemes, and return frequencies are entered during setup, with options to edit later. In addition to this, these can also be configured from the settings section.	Noted
9.54	How are bank details set up in the solution?	Bank accounts are added with type, name, number, sort code, IBAN, and can be marked	Noted
9.55	How are chart of accounts managed and customised?	as primary. The system includes predefined codes, with options to add, edit, or archive user-defined	Noted
9.56	What customisations are possible in the bookkeeping module?	accounts. Users can customise templates, numbering sequences, VAT rates, reports, and dashboard views.	Noted
9.57	How does the Bookkeeping module interface with the other modules?	Bookkeeping integrates with Accounts & Tax, Payroll, and CRM, ensuring consistent data flow across modules within Acting Office.	Noted
9.58	Does the solution integrate to any third party tools?	-	Noted

Configurat	tion / Integration		

10.27	What types of businesses does the tool support (e.g. Ltd, LLP, partnerships, sole traders, trusts, charity etc.)	The Accounts and Tax module currently supports limited companies, LLPs, sole traders and partnerships. Development is currently underway to incorporate registered trusts and charities for this module.	Noted. Trust and Charity entities are not currently supported by the Accounts and Tax module. There is activity on the roadmap to expand this functionality. See conclusion point 2.06.
10.28	How does a user configure account reports template in the solution?	Report templates are managed in the Settings menu, where users can edit notes, pages, and report types for future use.	Noted
10.29	How does the client finance team access the solution? What is the difference between external client and internal user	Client's finance team will have visibility of the finance reports within the platform. However, firms have an option to use REST APIs to fetch billing data from AO to their systems.	Noted
		Clients have a separate login which gives them access to their bookkeeping and a range of other options like paying the invoices, accepting quotes, sharing information, viewing documents etc but it does not allow them to get into the solution as a whole.	
10.30	What customisation is allowed in the accounts and tax	Customisation includes report layouts, notes, accounting policies, chart of accounts, and page inclusion.	Noted
10.31	How are business rules and automation enabled in the solution?	Automation is embedded through rules such as mapping accounts, auto-populating notes, tax calculations, and system validations. Custom rules can also be configured.	Noted
10.32	How does the Accounts & Tax module interface with the other modules?	Trial balances can be imported from Bookkeeping, payroll journals posted directly, and reports integrated with client dashboards.	Noted
10.33	Does the solution integrate to any third party tools?	Yes. Integrations include Companies House to auto-fetch of officers/periods, HMRC for submissions, and Freeagent to import trial balance.	Noted

Task & Tin	ne Tracking		
	How are user tasks tracked in the solution? How are new tasks created in the solution?	Tasks in Acting Office are tracked through structured workflows split into task steps, each with real-time statuses (Waiting, In Progress, Completed, N/A). Updates occur automatically via workflow triggers or can be managed manually. Users track tasks from the dashboard (colour-coded by priority), client profile, or central task list, with a full history log maintained for transparency. Tasks are created either automatically (e.g., via Companies House integration) or manually through the client profile or task section. When creating a task, users define	Noted
11.00		type, client, title, action date, due date, deadline, priority, and assignee, with the option to attach documents and mark tasks as client-specific.	
11.02	How are timesheets managed in the solution? Can users track time manually and automatically in the solution?	Timesheets in Acting Office can be managed per user, with time automatically tracked across calls, emails, modules, and client activities. Users can also view team-wide time statistics. Where needed, time can be logged manually using the manual timesheet option.	Noted
11.03	What report is available for task management?	A dedicated timesheet report provides detailed insights into user and team time statistics, supporting task management and productivity tracking.	Noted
11.04	How is the time tracked for each task?	AO's automated timesheet specifically tracks the user-activity for default KPIs and is linked with workflows to ensure work has been completed with the stipulated timeframe	Noted
11.05	Are there validations to ensure minimum daily hours are logged?	Every practice has it's own benchmark, hence, it is upto the practices to decide the minimum billable hours. Number of working hours can be configured for data validation by the IT team at the time of setting up the client practice.	Noted
11.06	Can time entries be linked to specific clients, tasks, or services?	AO keeps a track of manual and automated timesheet to understand user activity and billed hours.	Noted
		Manual timesheet entries can be manually linked to clients in order to keep track of billable hours.	
11.07	Is there a review or approval workflow for submitted timesheets?	There are 2 separate reports: 1. Timesheets (manual + automated) 2. Workflow reports (detailing the user completed, due, or upcoming workflows), to manage service deliveries for service excellance team. Please note that there is no approval flow for the timesheet submitted in the out-of-box	Noted. The timesheet functionality does not include an approval workflow by default. However, if approval functionality is required, clients can submit a request to the Acting Office, which can support
		solution. However it can be configured and included in the workflow reports if needed.	custom workflow development. See conclusion point 2.07.
11.08		With the timesheets, it is progressed via recording it as a WIP and then while creating an	Confirmed
	so, how is user rate and WIP billing managed in the solution?	invoice, it validates any of the WIPs for the client and then auto-fetch the bill values which are editable for further changes to invoice. The time entries will be converted to WIP at the end of the day with charge rates provided. The WIP can be included in the client invoice. WIP amount can be edited to match invoice amount or reported as loss.	
Support &	User Guide	·	
11.09	How does a user submit a support request? Does the solution have live chat support?	Acting Office provides an in-built ticketing system for raising support requests. Users can log requests, report issues, or suggest enhancements directly within the software. Each ticket is automatically assigned to the relevant support team, acknowledged, and tracked until resolution. At present, the solution does not include a live chat feature; however, the ticketing system ensures that all support needs are properly logged and addressed.	Noted
11.10	How does a user for in-app guidance?	In-app guidance is available through help icons located throughout the solution. Clicking these icons redirects the user to a comprehensive help page, which contains detailed documentation, step-by-step guides, screenshots, and instructional videos. This ensures that users have on-demand access to practical resources without leaving the application.	Confirmed
Collaborat	l tion		
11.11		Cloud architecture provides flexibility to open 2 different actions for the same client in different windows and perform actions simultaneuosly. For instance, bookkeeping can be done on a tab and on another tab payroll can be processed for it's employees. However, two users cannot work on the same file/task at same point of time.	Noted
11.12		AO's client side data requests enable clients to provide the required data to complete a task. A few examples are: 1. Data request for collecting financial information, in order to proceed with annual accounts preparation 2. Confirming employee salaries via a data request which is editable to udpate employee information like tax code, salaries etc Once submitted by the client, the accountant has to review it before passing it onto the right module with a click of a button or even request additional info based on queries.	Confirmed
Document	t & access control		
11.13	How does the system manage document visibility across different client contacts?	Acting Office provides centralised document storage with structured categorisation (folders, tags, bookmarks, important files). From a user's perspective, documents uploaded or automatically saved (e.g., KYC documents) are organised under the relevant client profile and can be managed using features such as notes, bookmarks, and tagging. From a client's perspective, only documents explicitly shared with them through their client portal access will be visible. This ensures that sensitive files remain internal to the practice unless intentionally shared.	Confirmed
